Connection methods

The 3RT contactors are available with screw terminals (box terminals or flat connectors) or with spring-loaded terminals.

The 3TG10 power relays/miniature contactors are available with screw terminals or flat connectors.

Screw terminals

Spring-loaded terminals

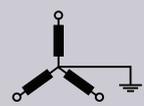

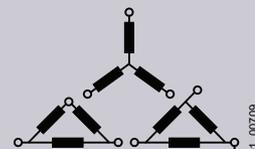

Flat connectors

The connection method is indicated in the corresponding tables by the symbols shown on orange backgrounds.

Voltage data

The data for 3-phase power systems according to IEC 60947-4-1 are valid for the following line system configurations:

Voltage U_e	Line system configurations	
	Three-phase four-wire systems	Three-phase three-wire systems
		
V	V	V
230	--	230
400	230/400	400
440	260/440	440
500	--	500
690	400/690	690 (only from size S3)
1 000	--	1 000

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

General data

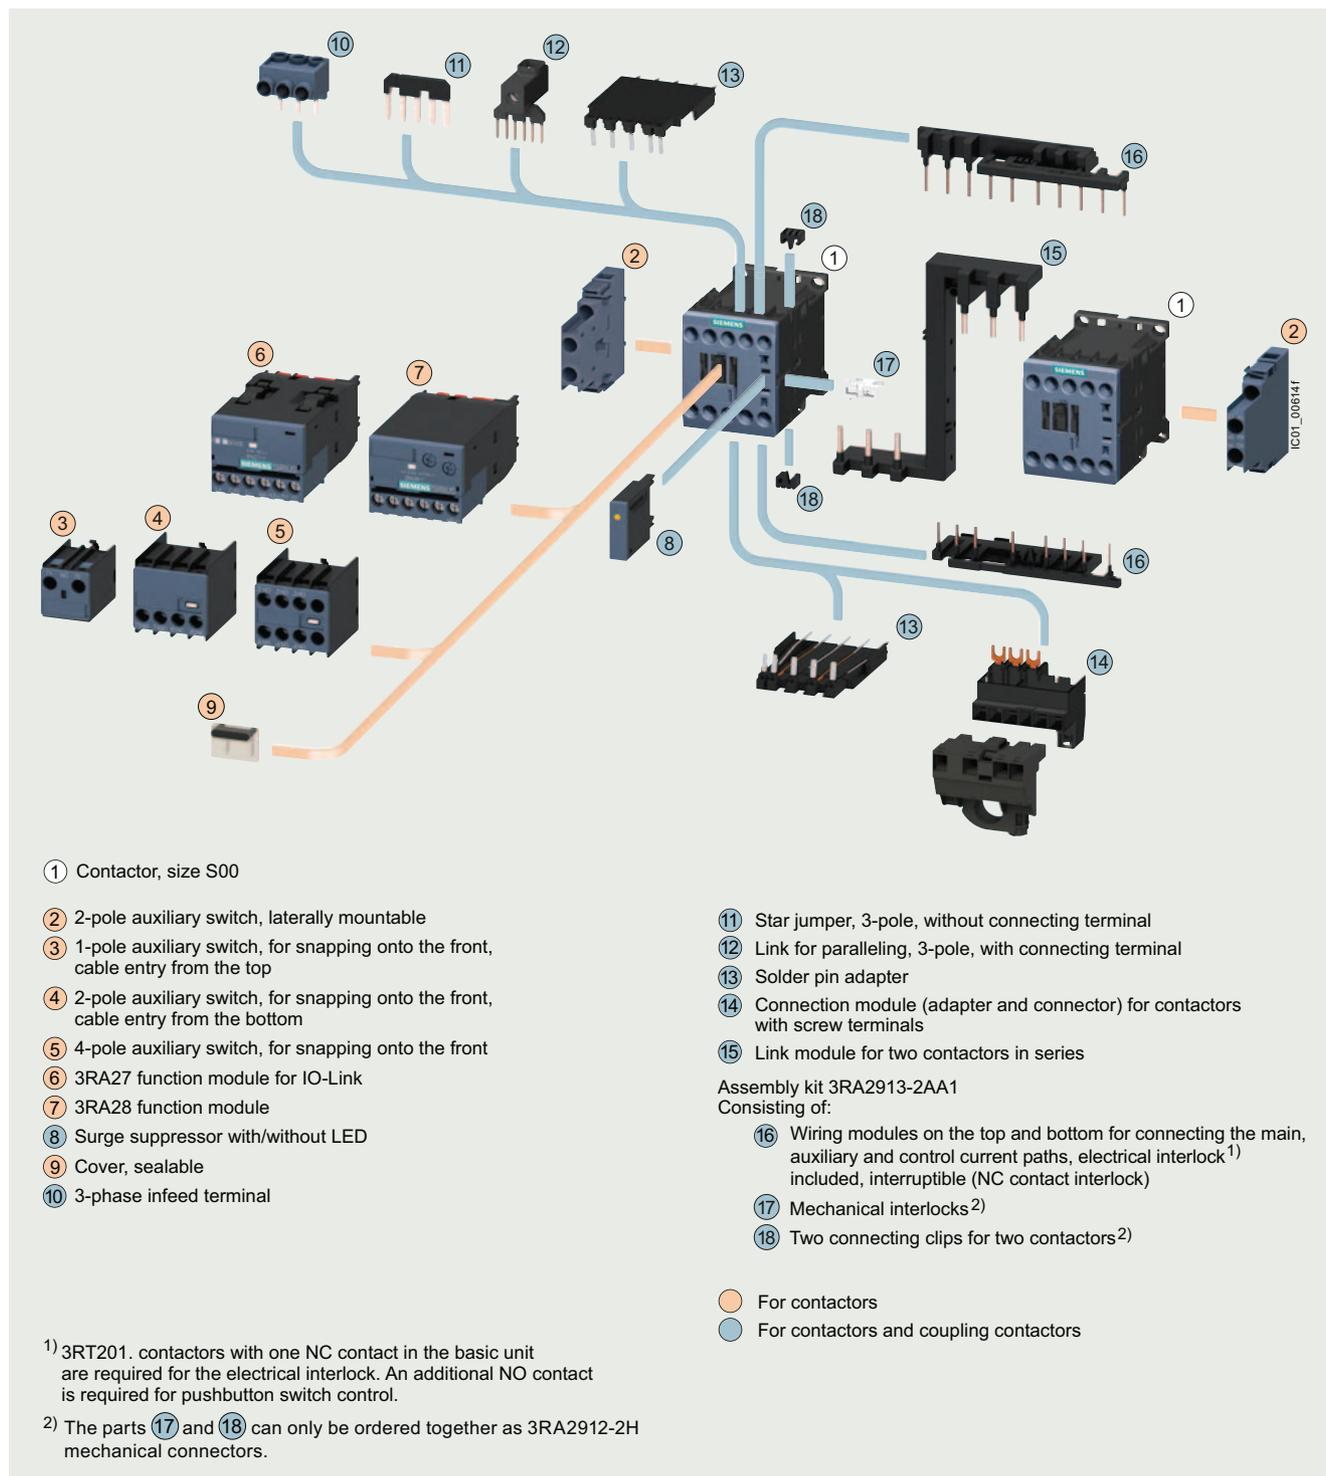

Overview

The SIRIUS family of switching devices

The SIRIUS modular system with its components for the switching, starting, protection and monitoring of motors and industrial systems stands for the fast, flexible and space-saving construction of control cabinets.

3RT2.1 contactors · Size S00 with mountable accessories

The figure shows the version with screw terminals

Accessories and spare parts, see pages 3/66 to 3/120.

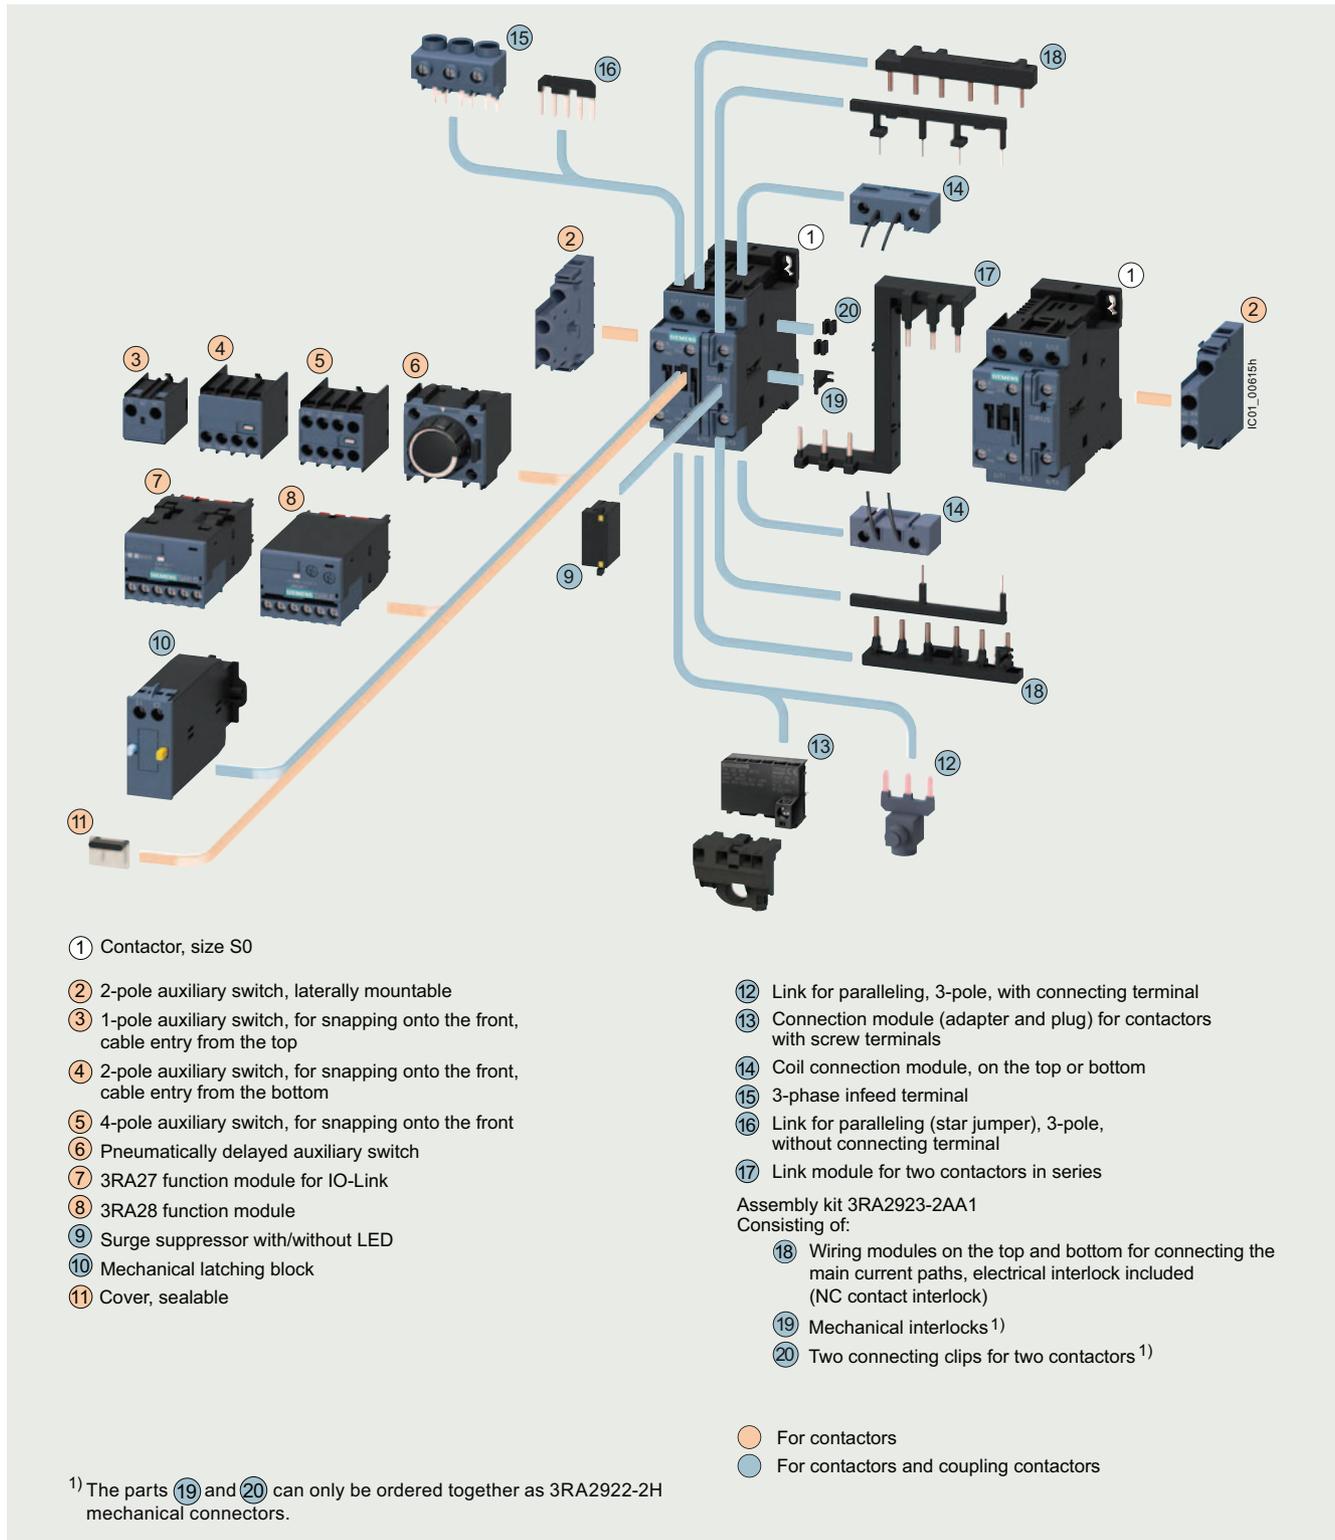

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

General data

3RT2.2 contactors · Size S0 with mountable accessories

The figure shows the version with screw terminals

Accessories and spare parts, see pages 3/66 to 3/120.

Accessories and spare parts, see pages 3/66 to 3/120.

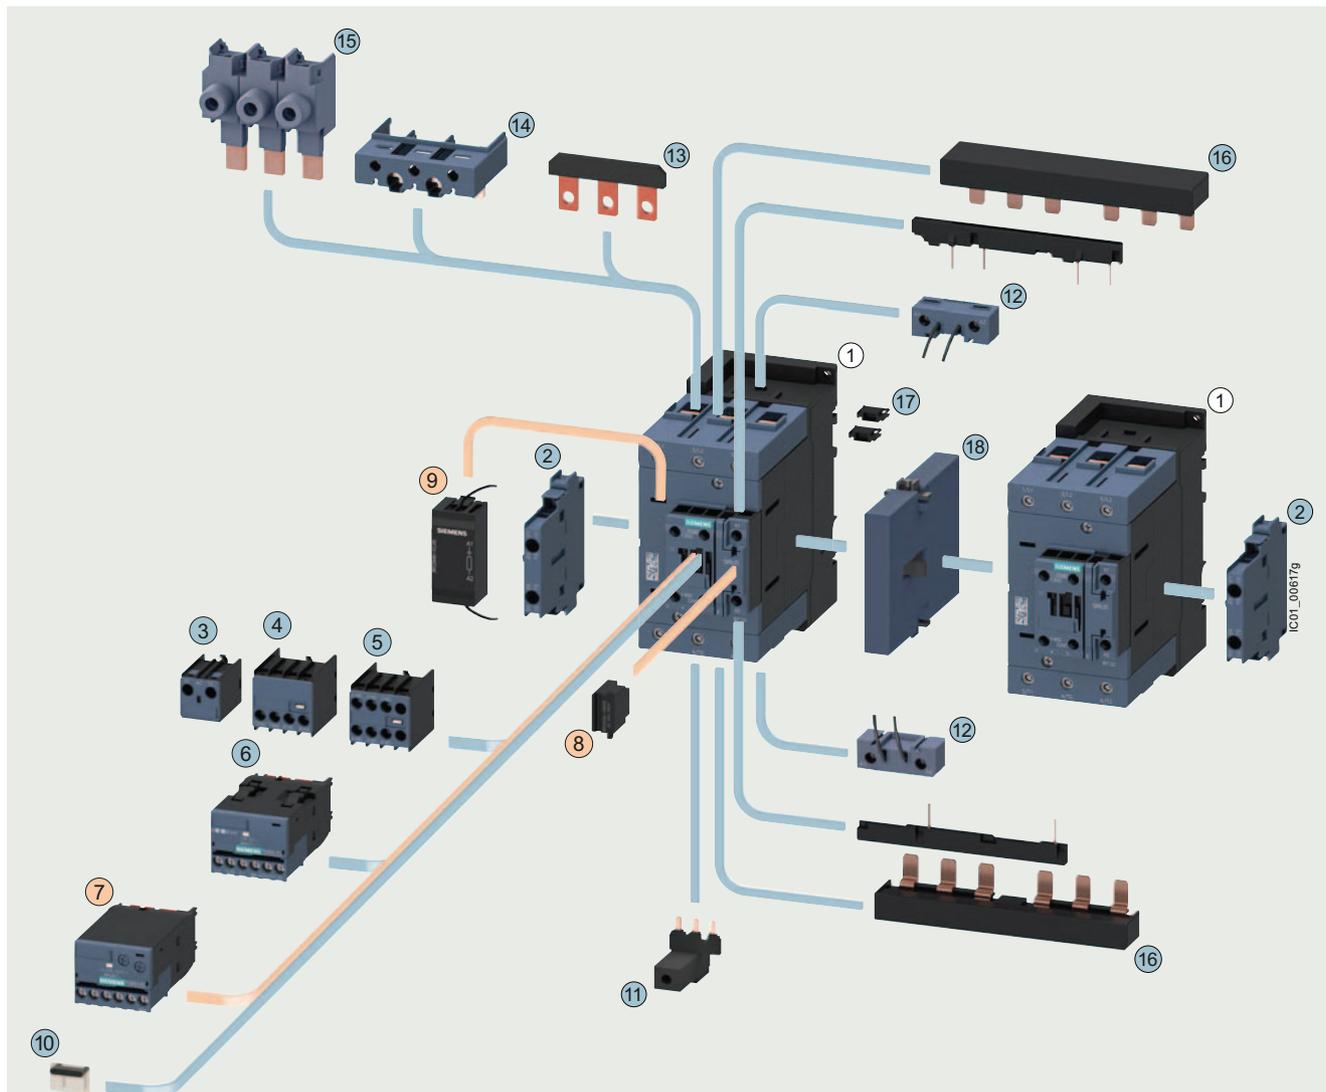

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

General data

3RT2.4 contactors · Size S3 with mountable accessories

The figure shows the version with screw terminals

① Contactor, size S3

② 2-pole auxiliary switch, laterally mountable

③ 1-pole auxiliary switch, for snapping onto the front, cable entry from the top

④ 2-pole auxiliary switch, for snapping onto the front, cable entry from the bottom

⑤ 4-pole auxiliary switch, for snapping onto the front

⑥ 3RA27 function module for IO-Link

⑦ 3RA28 function module

⑧ Surge suppressor with/without LED (Varistor, diode assembly), can be plugged in on the front

⑨ Surge suppressor without LED (RC element), can be plugged in on the front in the recesses on the left next to the connection block

⑩ Cover, sealable

⑪ Links for paralleling, 3-pole, with connecting terminal

⑫ Coil connection module, top or bottom

⑬ Links for paralleling (star jumper), 3-pole, without connecting terminal

⑭ Auxiliary conductor terminal, 3-pole

⑮ 1-phase infeed terminals (3 units)

Assembly kit 3RA2943-2AA1

Consisting of:

⑯ Wiring modules on the top and bottom for connecting the main, auxiliary and control current paths, electrical interlock¹⁾ included, interruptible (NC contact interlock)

⑰ Two connectors for two contactors

To be ordered separately:

⑱ Mechanical interlock

¹⁾ 3RT201. contactors with one NC contact in the basic unit are required for the electrical interlock. An additional NO contact is required for pushbutton switch control.

○ For contactors

○ For contactors and coupling contactors

Accessories and spare parts, see pages 3/66 to 3/120.

Power contactors for switching motors

General data

3RT105 and 3RT145 contactors - Size S6 with mountable accessories

Accessories ③ to ⑥ and ⑪ to ⑯ can be mounted on contactors ① and ② respectively.

① 3RT105 and 3RT145 air-break contactors, size S6 (version without withdrawable coil)

② 3RT105.-P and 3RT145.-P air-break contactors with solid-state operating mechanism and remaining lifetime indicator, size S6 (version with withdrawable coil and laterally mountable add-on module)

Can be mounted on the front of contactors ① and ②

- ③ 3RH192: 4-pole auxiliary switch
- ④ 3RH192: 1-pole auxiliary switch (max. four can be snapped on)
- ⑤ 3RT1926-4MA10: Cover, sealable

Can be mounted on the side of contactors ① and ②

- ⑥ 3RH192: 2-pole auxiliary switch

Can be inserted in top of contactors

- ⑦ 3RT1955-5A.3.: Withdrawable coil, standard operating mechanism
- ⑧ 3RT1955-5N.3.: Withdrawable coil, solid-state operating mechanism
- ⑨ 3RT1955-5P.3.: Withdrawable coil, solid-state operating mechanism and remaining lifetime indicator

Can be plugged on the top of contactor operating mechanisms ⑦ and ⑧

- ⑩ 3RT1956-1C: Surge suppressor (RC element)

Can be mounted on the top or bottom on busbars or box terminals of contactors ① and ②

- ⑪ 3RT1956-4G: Box terminal block
- ⑫ 3TX7500-0A: Auxiliary conductor terminal, 1-pole
- ⑬ 3TX6526-3B: Terminal cover (can be screwed on), covers one busbar connection
- ⑭ 3RT1956-4EA1: Terminal cover for busbar connection and on box terminal
- ⑮ 3RT1956-4EA3: Terminal cover for busbar connection
- ⑯ 3RT1956-4EA2: Terminal cover on box terminal
- ⑰ 3RT1956-4EA4: Terminal cover for busbar connection, covers ⑭, ⑮ can be mounted to ⑰

Can be mounted separately

- ⑱ 3RP25: Timing relay, electronically delayed (ON-delay or OFF-delay or star-delta (wye-delta) starting)
- ⑲ 3ZY1311-0AA00: Push-in lugs for wall mounting of timing relays

Accessories and spare parts, see pages 3/66 to 3/120.

Power contactors for switching motors

General data

3RT106 and 3RT146 contactors - Size S10 with mountable accessories

Accessories ③ to ⑥ and ⑪ to ⑮ can be mounted on contactors ① and ② respectively.

① 3RT106 and 3RT146 air-break contactors, size S10 (version without withdrawable coil)

② 3RT106.-P and 3RT146.-P air-break contactors with solid-state operating mechanism and remaining lifetime indicator, size S10 (version with withdrawable coil and laterally mountable add-on module)

Can be mounted on the front of contactors ① and ②

③ 3RH192: 4-pole auxiliary switch

④ 3RH192: 1-pole auxiliary switch (max. four can be snapped on)

⑤ 3RT1926-4MA10: Cover, sealable

Can be mounted on the side of contactors ① and ②

⑥ 3RH192: 2-pole auxiliary switch

Can be inserted in the top of contactors

⑦ 3RT1965-5A.3.: Withdrawable coil, standard operating mech.

⑧ 3RT1965-5N.3.: Withdrawable coil, solid-state operating mech.

⑨ 3RT1965-5P.3.: Withdrawable coil, solid-state operating mech. and remaining lifetime indicator

Can be plugged on the top of contactor operating mechanisms ⑦ and ⑧

⑩ 3RT1956-1C: Surge suppressor (RC element)

Can be mounted at the top or bottom on busbars or box terminals of contactors ① and ②

⑪ 3RT1966-4G: Box terminal block

⑫ 3TX6546-3B: Terminal cover (can be screwed on), covers one busbar connection

⑬ 3RT1966-4EA1: Terminal cover for busbar connection and on box terminal

⑭ 3RT1966-4EA3: Terminal cover for busbar connection

⑮ 3RT1966-4EA2: Terminal cover on box terminal

Can be mounted separately

⑯ 3RP25: Timing relay, electronically delayed (ON-delay or OFF-delay or star-delta (wye-delta) starting)

⑰ 3ZY1311-0AA00: Push-in lugs for wall mounting of timing relays

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

General data

3TF68 and 3TF69 vacuum contactors · Size 14 with mountable accessories

① 3TF68 and 3TF69 vacuum contactors, size 14

Can be inserted or mounted on the front of the contactor (with the cover removed)

- ② Solenoid coils for AC operation, with switch-on electronics for contactor
3TF6844-.C: 3TY7683-0C.7
3TF6944-.C: 3TY7693-0C.7
- ③ Solenoid coils for DC operation
3TF6833-.D: 3TY7683-0D.4

Can be mounted on the front from above or below on busbars

- ④ Terminal cover for busbar connection (1 set = 2 units), attached to the right and left busbar connection in each case
3TF68: 3TX7686-0A
3TF69: 3TX7696-0A

Can be mounted on the front of 3TF68 contactors from below on busbars

- ⑤ Terminal cover for busbar connection (on the output side in combination with overload relay)
3TF68: 3TX7686-0B

Can be snapped onto the left-hand side of the auxiliary switches

- ⑥ Surge suppressor (only with DC operation)
3TF6.33-.D: 3TX7572-3.

Accessories and spare parts, see pages 3/126 to 3/130.

-- Version not possible

✓ Version possible

1) Connection method:

- Main circuit: Busbar connection (optionally with box terminals),
- Auxiliary/control circuit: Screw terminals or spring-loaded terminals.

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

SIRIUS 3RT contactors, 3-pole up to 250 kW

Contactors with screw terminals: 3RT20 (sizes S00 to S3) and 3RT10 (sizes S6 to S12)

Our power range of contactors for switching IE2 motors and highly efficient IE3 and IE4 motors:

- Contactors, [see pages 3/43 to 3/63](#):
 - Size S00: 3RT201 to 7.5 kW
 - Size S0: 3RT202 to 18.5 kW
 - Size S2: 3RT203 to 37 kW
 - Size S3: 3RT204 to 55 kW
 - Sizes S6 to S12: 3RT10 up to 250 kW
- Vacuum contactors, [see page 3/121 onwards](#):
 - Sizes S10 and S12: 3RT12 to 250 kW
 - Size 14: 3TF6 to 450 kW

Standards

IEC 60947-1, IEC 60947-4-1, IEC 60947-5-1 (auxiliary switches)

Contactors with increased tamper protection

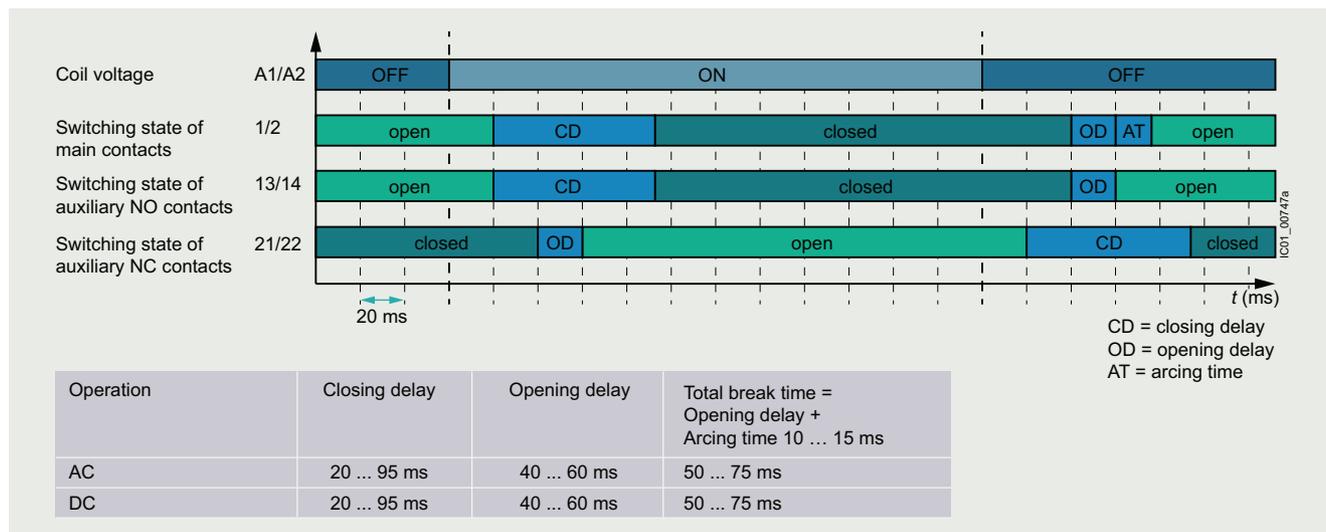

Increased tamper protection is ensured either by using our contactor versions with factory-installed, permanently mounted auxiliary switches which are protected against mechanical external actuation (e.g. 3RT20...-3MA0 or 3RT10...-3PA0 contactors), or by using the 3RT2916-4MA10 or 3RT1926-4MA10 sealable cover as an accessory ([see page 3/112](#)).

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

SIRIUS 3RT contactors, 3-pole up to 250 kW

Operating times

Operating times using the example of 3RT1054-1AB36 contactor

Protecting connections against short circuit, overload and overvoltage

All connections must generally be protected against overload and short circuits using suitable measures. Different constraints must be considered depending on the type of connection:

Short-circuit and overload protection of main connections

For information on the protection of a free-standing contactor, see the [technical product data sheet](#).

For more information on device combinations such as contactor with overload relay or contactor with motor starter protector/circuit breaker as motor feeder, see

- [Digital Configuration Manual for load feeders](#)
- [Configuration Manual for load feeders](#)

Short-circuit and overload protection of auxiliary connections

For information on the protection of auxiliary contacts, see the [technical product data sheet](#).

Short-circuit and overload protection of control supply voltage or supply voltage connections

First of all, the relevant standards and regulations for configuring control cabinets and the parts and components installed in them must be taken into account, for example for cable dimensioning.

One possible protection for these circuits could be the selection of a suitable power supply, i.e. one with a current-limiting function. In the selection of the source and the connecting cable, the load characteristics of the contactor must be considered (short-time inrush current peaks for solid-state contactor operating mechanisms, switch-on power, holding power). The same applies to the selection of suitable protective devices.

If there are further contact blocks in the circuit, such as the auxiliary contact system of an overload relay that operates the contactor, the short-circuit protection necessary for this must also be considered.

For further recommendations, e.g. the use of miniature circuit breakers or circuit breakers for equipment in control circuits, see [Control panel tip – Selecting and dimensioning suitable power supplies quickly and reliably](#).

Short-circuit and overload protection of contactors with digital input

A typical rated current of 20 mA applies to these inputs based on the PLC input types according to IEC 60947-4-1. The inputs can be protected accordingly.

- Contactors with PLC and F-PLC digital inputs:
 - For 3RT10...-P marked with IN+/IN-
 - For 3RT10...-S, -.N and 3RT20...-S marked with +/-
- Supply voltage connections A1 - A2:
 - For 3RT10...-N, -.P and 3RT20...-S, protection should be provided on the basis of the load characteristics. For information about power consumption, see the [technical product data sheet](#).
 - For 3RT10...-S, protection is already integrated.

Short-circuit and overload protection of other connections

The contactor version 3RT10...-P with remaining lifetime indicator (RLT) has additional connections H1 - H2 and R1 - R2. If A1 - A2 is already protected, further protection of H1 - H2 is not required.

For information on the protection of R1 - R2, see the [technical product data sheet](#).

Protection against overvoltage at the control supply voltage connection

3RT20 contactors supplied without a coil circuit can be retrofitted with RC elements, varistors, diodes or diode assemblies (combination of diode and Zener diode for short break times) for damping switching overvoltages in the coil and can be ordered separately as accessories, see [page 3/95 onwards](#).

The 3RT10 contactors are already equipped with coil damping (varistor).

Note:

The break times of the contactor, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase with damping.

For more detailed information about how damping affects the time response, see [Equipment Manual](#).

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

SIRIUS 3RT contactors, 3-pole up to 250 kW

Connection methods

Main circuit

- 3RT201 and 3RT202 contactors:
Screw terminals or spring-loaded terminals;
spring-loaded terminals with convenient plug-in design for device connectors
- 3RT203 and 3RT204 contactors:
Screw terminals with box terminal;
direct connection to the connecting bar is possible with cable lugs for 3RT204 when the box terminal is removed.
- 3RT10 contactors:
Screw terminals with connecting bars that the cables can be connected to using either cable lugs or flexible or rigid busbars. Alternatively, box terminals are available as accessories.

Auxiliary and control circuit

The 3RT contactors are available with screw terminals or spring-loaded terminals.

Electromagnetic compatibility

The contactors fulfill the requirements for environment category A.

Note:

When the contactors are used in an **environment with frequency converters**, the configuration notes must be observed, [see Equipment Manual](#).

Contact reliability of auxiliary contacts

If voltages ≤ 110 V and currents ≤ 100 mA are to be switched, the auxiliary contacts of the 3RT contactors or 3RH contactor relays should be used as they guarantee a high level of contact reliability.

These auxiliary contacts are particularly suitable for solid-state circuits with currents ≥ 1 mA at a voltage ≥ 17 V.

Motor protection

3RT20 contactors

For protection against overload, 3RU2 thermal overload relays ([see page 7/86 onwards](#)) or 3RB3 electronic overload relays ([see pages 7/98, 7/100 and 7/102](#)) can be mounted on the 3RT20 contactors.

3RT10 contactors

For protection against overload, 3RB2 electronic overload relays ([see pages 7/99, 7/101 and 7/103](#)) can be mounted on the 3RT10 contactors.

Plant and application monitoring

For monitoring and measuring in the application, 3RR2 monitoring relays can be mounted on the 3RT20 contactors ([see page 10/57](#)).

Contactors with voltage tap

The 3RT201 and 3RT202 contactors with voltage tap are special versions for mounting the SIRIUS 3RA2711 function modules for connection to the control system via IO-Link ([see page 3/70 onwards](#)).

Without a function module, these contactors can be used like the standard versions.

For more information on IO-Link, [see Industrial communication, page 2/1 onwards](#).

Operating mechanism types

3RT20 contactors

The standard versions are available with AC or DC operating mechanisms or as versions with a wide-range solid-state operating mechanism and a universal actuating voltage (AC or DC operation possible).

Versions with solid-state operating mechanisms for AC or DC operation with a fail-safe PLC input are also available for the 3RT203 and 3RT204 contactors.

Control takes place via the control supply voltage connection A1 - A2 with varying operating ranges ([see the technical product data sheet](#) for further details).

DC coupling contactors with reduced power consumption are also ideally suited for connection to the controller.

3RT10 contactors

The operating mechanisms are powered via a supply voltage with an operating range from 0.8 to $1.1 \times U_C$, optionally also controlled depending on the chosen mode of operation. Various rated voltage ranges are available for AC/DC control.

The following control or operating mechanism versions can be selected for contactors 3RT105 to 3RT107:

- 3RT10...-A contactors:
Standard operating mechanism for AC and DC operation (power consumption reduced from closing power to holding power)
- Solid-state operating mechanisms:
Overvoltage damping of the operating mechanism coil is already integrated in the electronics for contactors with solid-state operating mechanisms.
The following versions are available:
 - 3RT10...-N contactors:
With two operating modes: Direct control or via PLC digital input (24 V DC)
 - 3RT10...-P contactors:
Control via PLC digital input (24 V DC) only, but with additional remaining lifetime indicator (RLT)
 - 3RT10...-S contactors:
Control via fail-safe PLC digital input (24 V DC) only, for simplification of safety applications (without operating mode selection)

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

SIRIUS 3RT contactors, 3-pole up to 250 kW

Replacing solenoid coils, operating mechanisms or spare contacts

3RT20 contactors

Coil replacement is possible for contactors 3RT202 to 3RT204.

NOTICE:

Removal or changing of the operating mechanism or spare contacts is not permitted for 3RT20..-S contactors with fail-safe control.

3RT10 contactors

The operating mechanisms for 3RT10..-A/-N/-P contactors are removable and can be replaced simply by unlocking and pulling them out.

NOTICE:

Removal or changing of the operating mechanism is not permitted for 3RT10..-S contactors with fail-safe control.

Fitting auxiliary contacts and mounting additional auxiliary switches

Features in the delivery state

- 3RT20 contactors:
 - 3RT201 contactors:
 - An auxiliary contact is integrated in the basic unit.
 - 3RT202 to 3RT204 contactors:
 - The basic units contain two integrated auxiliary contacts (1 NO + 1 NC).
- 3RT10 contactors:
 - These contactors are supplied with two laterally mounted auxiliary switches. The fitting of auxiliary switches is possible on the front and on the side.

Expansion possibilities

All basic units (with the exception of coupling contactors in sizes S00 and S0) can be expanded using auxiliary switches. The permitted configuration must be taken into account.

Detailed information about the fitting of auxiliary switches for 3RT20 contactors, see [pages 3/77 to 3/84](#).

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

SIRIUS 3RT contactors, 3-pole up to 250 kW

Connection of contactors to fail-safe control modules

While contactors with smaller power ratings can be connected directly to the outputs of fail-safe controllers, implementing safety-related applications with standard contactors with higher power is much more complicated and elaborate because of the necessary coupling links.

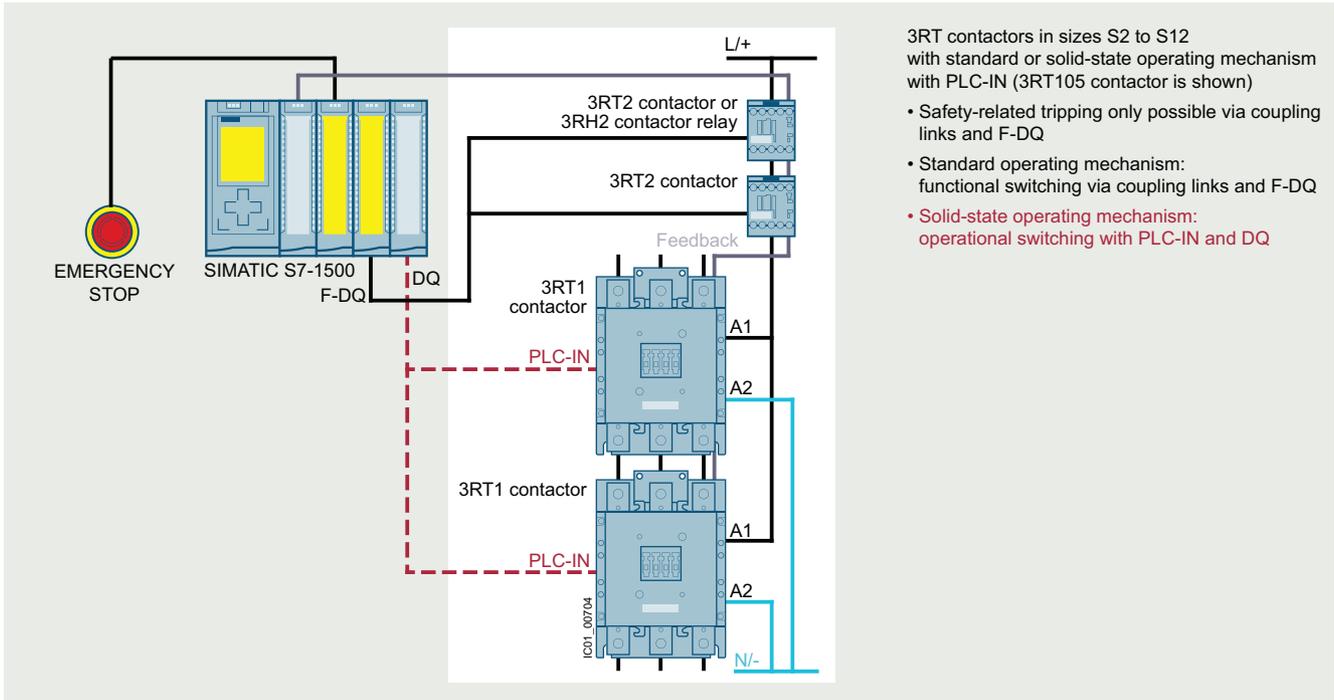

Due to their fail-safe digital input, special contactors provide a much simpler way of doing this:

- 3RT20...-S contactors in sizes S2 and S3
- 3RT10...-S contactors in sizes S6 to S12

For more information, see

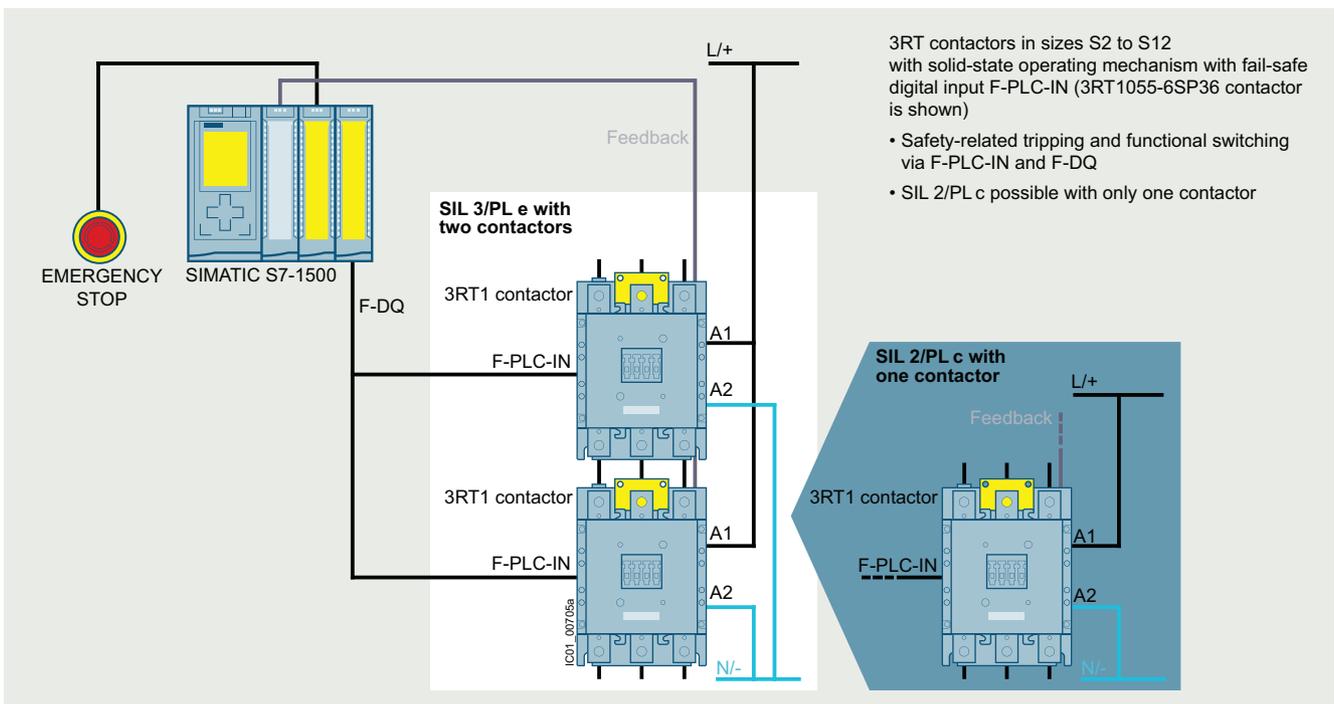

- Safety technology, page 11/1 onwards
- Guide of use for contactors in safety applications

Example for SIL 2 and SIL 3/PL e application – previously:

Application with safety-related tripping with standard contactors using the example of a 3RT105 contactor

Example for SIL 3/PL e (left-hand side) or SIL 2/PL c (right-hand side) application – new:

Application with safety-related tripping with contactors with fail-safe control using the example of a 3RT105 contactor

Switching devices – Contactors and contactor assemblies – for switching motors

SIRIUS 3RT contactors, 3-pole up to 250 kW

Contactors for special applications

- SIRIUS 3RT.4 contactors for weak or non-inductive loads (AC-1), 3-pole, [see page 4/8 onwards](#)
- SIRIUS 3RT20 or 3RT10 contactors with an extended operating range, 3-pole (for railway applications), [see page 4/53 onwards](#)

Article number scheme

Product versions	Article number
SIRIUS power contactors	3RT2 □ □ □ - □ □ □ □ □ - □ □ □ □
Device type	e.g. 0 = 3-pole motor contactor □
Size of the contactor	e.g. 4 = S3 □
Rating dependent on size	e.g. 5 = 37 kW for S3 □
Type of electrical connection	e.g. 1 = Screw terminals (main and auxiliary circuits) □
Operating range/solenoid coil circuit	e.g. A = AC standard/without coil circuit □
Rated control supply voltage	e.g. P0 = 230 V AC, 50 Hz □ □
Auxiliary switches	e.g. 0 = for S3: 1 NO + 1 NC integrated □
Special versions	□ □ □ □
Example	3RT2 0 4 5 - 1 A P 0 0

Note:

The article number scheme shows an overview of product versions for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the selection and ordering data.

Type	Contactors			
	3RT2		S3	3RT1
Size	S00 to S2		S3	S6 to S12
Rated data of the auxiliary contacts				
According to IEC 60947-5-1				
Data apply to integrated auxiliary contacts and conventional contacts in the auxiliary switches				
Rated insulation voltage U_i (pollution degree 3)	V	690	1 000	--
• For laterally attachable auxiliary switches	V	690	690	500
• For front auxiliary switches	V	690	690	690
Conventional thermal current I_{th} = rated operational current I_e/AC-12	A	10		
AC load				
Rated operational current I_e/AC-15				
• At rated operational voltage U_e	up to 230 V	A	10 ¹⁾	6
	400 V	A	3	6
	500 V	A	2	3
	690 V	A	1	2
				1 ²⁾
DC load				
Rated operational current I_e/DC-12				
• At rated operational voltage U_e	24 V	A	10	10
	60 V	A	6	6
	110 V	A	3	3
	125 V	A	2	2
	220 V	A	1	1
	440 V	A	0.3	0.3
	600 V	A	0.15	0.15 ²⁾
Rated operational current I_e/DC-13				
• At rated operational voltage U_e	24 V	A	10 ¹⁾	10 ³⁾
	60 V	A	2	2
	110 V	A	1	1
	125 V	A	0.9	0.9
	220 V	A	0.3	0.3
	440 V	A	0.14	0.14
	600 V	A	0.1	0.15 ²⁾
Contact reliability at 17 V, 1 mA	Frequency of contact faults < 10 ⁻⁸ i.e. < 1 fault per 100 million operating cycles			
According to IEC 60947-5-4				

1) 3RH22, 3RH29, 3RT2...-...4, 3RT2...-...6: I_e = 6 A at AC-15 and DC-13.

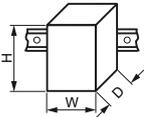

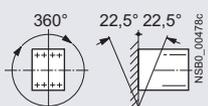

2) With laterally attachable auxiliary switches, only the currents for rated operational voltages up to 500 V apply.

3) For laterally attachable auxiliary switches, DC-13/at 24 V: Max. 6 A.

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

SIRIUS 3RT contactors, 3-pole up to 250 kW

Type Size	Contactors				
	3RT2015 S00	3RT2016	3RT2017	3RT2018	
Rated data of the main contacts					
Load rating with AC					
Utilization category AC-3 and AC-3e					
• Rated operational currents I_e	up to 400 V A	7	9	12	16
	440 V A	7	9	11	14
	500 V A	6	7.7	9.2	12.4
	690 V A	4.9	6.7		8.9
• Rated power for slip-ring or squirrel-cage motors at 50 and 60 Hz	at 230 V kW	1.5	2.2	3	4
	400 V kW	3	4	5.5	7.5
	690 V kW	4	5.5		7.5
Thermal load capacity	10 s current A	56	72	96	128
Power loss per main conducting path	at $I_e/AC-3/AC-3e/400 V$ W	0.2	0.3	0.5	1
Utilization category AC-4 (at $I_a = 6 \times I_e$)¹⁾					
• Maximum values					
- Rated operational current I_e	up to 400 V A	6.5	8.5		11.5
- Rated power for squirrel-cage motors at 50 and 60 Hz	up to 400 V kW	3	4		5.5
• The following applies to a contact endurance of about 200 000 operating cycles:					
- Rated operational currents I_e	up to 400 V A	2.6	4.1		5.5
	690 V A	1.8	3.3		4.4
- Rated power for squirrel-cage motors at 50 and 60 Hz	at 230 V kW	0.67	1.1		1.5
	400 V kW	1.15	2		2.5
	690 V kW	1.15	2.5		3.5

¹⁾ The data applies to 3RT2516 and 3RT2517 contactors (2 NO + 2 NC) up to a rated operational voltage of 400 V only.

Type Size	Contactors	
	3RT2015 to 3RT2018 S00	
Conductor cross-sections		
Main conductors, auxiliary conductors and coil terminals (1 or 2 conductors can be connected)		
		 Screw terminals
• Solid or stranded	mm ²	2 x (0.5 ... 1.5) ¹⁾ ; 2 x (0.75 ... 2.5) ¹⁾ ; max. 2 x 4
• Finely stranded with end sleeve (DIN 46228)	mm ²	2 x (0.5 ... 1.5) ¹⁾ ; 2 x (0.75 ... 2.5) ¹⁾
• AWG cables, solid or stranded	AWG	2 x (20 ... 16) ¹⁾ ; 2 x (18 ... 14) ¹⁾ ; 2 x 12
• Terminal screw		M3 (for Pozidriv size 2; Ø 5 ... 6 mm)
• Tightening torque	Nm	0.8 ... 1.2 (7 ... 10.3 lb.in)
Main conductors, auxiliary conductors and coil terminals²⁾ (1 or 2 conductors can be connected)		
		 Spring-loaded terminals
• Operating tool	mm	3.0 x 0.5
• Solid or stranded	mm ²	2 x (0.5 ... 4)
• Finely stranded with end sleeve (DIN 46228)	mm ²	2 x (0.5 ... 2.5)
• Finely stranded without end sleeve	mm ²	2 x (0.5 ... 2.5)
• AWG cables, solid or stranded	AWG	2 x (20 ... 12)
Auxiliary conductors for front and laterally mounted auxiliary switches²⁾ (1 or 2 conductors can be connected)		
• Operating tool	mm	3.0 x 0.5
• Solid or stranded	mm ²	2 x (0.5 ... 2.5)
• Finely stranded with end sleeve (DIN 46228)	mm ²	2 x (0.5 ... 1.5)
• Finely stranded without end sleeve	mm ²	2 x (0.5 ... 2.5)
• AWG cables, solid or stranded	AWG	2 x (20 ... 14)

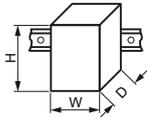

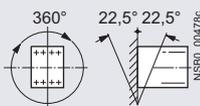

¹⁾ If two different conductor cross-sections are connected to one clamping point, both cross-sections must lie in one of the ranges specified.

²⁾ Max. outer diameter of the conductor insulation: 3.6 mm. On spring-loaded terminals with conductor cross-sections $\leq 1 \text{ mm}^2$ an insulation stop is recommended, see page 3/115.

¹⁾ Coil operating range
- At 50 Hz: 0.8 to 1.1 x U_c,
- At 60 Hz: 0.85 to 1.1 x U_c.

²⁾ In the case of AC/DC coils, increased pickup currents (2.6 A on average) arise during the first 230 ms. For direct control by PLC, we therefore recommend special coupling contactors with reduced power consumption. The connection of one 3RT203.-KB4. coupling contactor is possible per PLC output port with an output current of 2 A, see page 3/56.

³⁾ In the case of DC coils, increased pickup currents (2.1 A on average) arise during the first 230 ms.

	mm ²	2 x (0.25 ... 2.5)			
	AWG	2 x (24 ... 14)			

¹⁾ 3RT105.: When using cable lugs according to DIN 46235, use the 3RT1956-4EA1 terminal cover for conductor cross-sections from 95 mm² to maintain the phase clearance, see page 3/112.

²⁾ 3RT106. and 3RT107.: When connecting cable lugs according to DIN 46234 for conductor cross-sections larger than 240 mm² and according to DIN 46235 for conductor cross-sections larger than 185 mm², the 3RT1966-4EA1 terminal cover is required to maintain the phase clearance, see page 3/112.

³⁾ If two different conductor cross-sections are connected to one clamping point, both cross-sections must lie in one of the ranges specified.

⁴⁾ Max. outer diameter of the conductor insulation: 3.6 mm. On spring-loaded terminals with conductor cross-sections ≤ 1 mm² an insulation stop is recommended, see page 3/115.

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

SIRIUS 3RT contactors, 3-pole up to 250 kW **IE3/IE4 ready** **AC-3e**

AC/DC operation

- Certified and fail-safe 24 V DC digital input with max. 20 mA, e.g. for control via the fail-safe output module of a controller (F-PLC) or safety relay
- Achievable Safety Integrity Level (SIL) according to IEC 62061 and Performance Level (PL) according to ISO 13849-1 with corresponding fault diagnostics:
 - With one contactor: SIL 2 or PL c
 - With two contactors in series: SIL 3 or PL e
 - Fail-safe applications can be implemented using this contactor.
- Extended solenoid coil operating range 0.8 to $1.1 \times U_c$
- Power consumption reduced from closing power to holding power

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > General data

Overview

Extensive accessories and spare parts are available for SIRIUS 3RT power contactors and SIRIUS 3RH2 contactor relays.

These components are easily fitted to the contactors without the use of any tools according to requirements.

Graphic overviews with mountable accessories:

- 3RT2 contactors, see pages 3/8 to 3/11
- 3RT10, 3RT12 and 3RT14 contactors, see pages 3/12 to 3/16
- 3RH2 contactor relays, see page 5/5

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > General data

Auxiliary switches

The auxiliary switches can be designed as force-guided contacts in 3RH contactor relays or also as mirror contacts in the case of 3RT power contactors.

For more information on force-guided operation and mirror contacts, see [Manuals](#) → [More information](#), page 3/73, and in the [selection and ordering data](#), page 3/77 onwards.

Solid-state time-delay auxiliary switches for mounting on 3RT2 contactors and 3RH2 contactor relays

See pages 3/73 and 3/94

The 3RA28 solid-state time-delay auxiliary switches which can be mounted on the contactor are designed for applications in the range from 24 to 240 V AC/DC (wide voltage range). Both the electrical and mechanical connection are made by simple snapping on and locking.

The time-delay auxiliary switch is supplied with power directly by two plug-in contacts through the coil terminals of the contactor, in parallel with A./A2.

A protective circuit (varistor) is integrated in each module.

A sealable cover is available to protect against careless adjustment of the set times.

Note:

Mounting more auxiliary switches on the contactor is not permitted.

Surge suppressors

- Without LED (also for spring-loaded terminals)
Sizes S00 to S3, see [page 3/95](#)
- With LED (also for spring-loaded terminals)
Sizes S00 to S3, see [page 3/96](#)

All 3RT2 contactors and 3RH2 contactor relays can be retrofitted with RC elements or varistors for damping switching overvoltages in the coil. Diodes or diode assemblies (combination of interference suppression diode and Zener diode for short break times) can also be used.

The surge suppressors are plugged onto the front of size S00 contactors. Space is provided for them next to a snap-on auxiliary switch.

Varistors, RC elements or diode assemblies can be plugged onto the front of size S0 to S3 contactors. Exception: For size S3, the RC element is inserted on the front into the recesses to the left of the connection block.

Coupling contactors are supplied either unconnected or with a suppressor diode, varistor or diode connected as standard, according to the version.

Note:

The break times of the contactor, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase with damping.

For more detailed information about how damping affects the time response, see [Equipment Manual](#).

Coupling links for control by PLC

See pages 3/74 and 3/97

- Operation with 24 V DC
- Operating range 17 to 30 V
- Low power consumption of 0.5 W
- An LED indicates the switching state.

The 3RH2924-1GP11 coupling link has an integrated surge suppressor (varistor) for the contactor coil being switched and is mounted on the size S0 contactor coil via a coil connection module.

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > General data

3RA28 function modules for mounting on 3RT2 contactors and 3RH2 contactor relays

See pages 3/75 and 3/98

Simply by being plugged in place, the SIRIUS function modules enable different functionalities required for the assembly of starters to be realized in the feeder. The function modules and wiring kits thus help to reduce the wiring work within the feeder practically to zero.

Protecting connections

The specifications for short-circuit protection (fuses, motor starter protectors/circuit breakers, or miniature circuit breakers) are available for the device connections of the main circuit and the auxiliary circuit.

In order to ensure a holistic view for the protection of the device connections, the manufacturer is obliged to provide all relevant information for short-circuit protection and overcurrent protection.

For more information, for example if device connections for the control supply voltage, the supply voltage, or digital inputs/digital outputs are not connected to self-limiting current sources or energy sources, see [Equipment Manual or the technical product data sheet](#).

SIRIUS function modules for direct-on-line starting

The electronic timing relays which can be mounted on the contactor are available in these versions:

- Sizes S00 and S0 for applications in the range from 24 to 240 V AC/DC (wide voltage range)
- Sizes S2 and S3 for applications in either the range from 24 to 90 V AC/DC or 90 to 240 V AC/DC

Both the electrical and mechanical connection are made by simple snapping on and locking.

A protective circuit (varistor) is integrated in each module.

The electronic timing relay with semiconductor output uses two contact legs to actuate the contactor underneath by means of a semiconductor after the set time t has elapsed.

The switching state feedback is performed by a mechanical switching state indicator (plunger). In addition, the auxiliary switches in the contactors are freely accessible and can be used for feedbacks to the control system or for signal lamps.

A sealable cover is available to protect against careless adjustment of the set times.

The snap-on function modules for direct-on-line starting are used above all for realizing time functions independently of the control system.

With the OFF-delay variant of the timing relay it is possible for example for the fan motor for cooling a main drive to be switched off with a delay so that sufficient cooling after operation is guaranteed; the programmer of the control system does not need to worry about such technical details of the plant.

The ON-delay timing relays enable for example the time-delayed starting of several drives so that the summation starting current does not rise too high, which could result in voltage failure.

The use of plug-in function modules for direct-on-line starting results in the following advantages:

- Reduction of control current wiring
- Prevention of wiring errors
- Reduction of testing costs
- Implementation of time functions independently of the control system
- Less space required in the control cabinet compared to a separate timing relay
- No additive protective circuit required (varistor integrated)

SIRIUS function modules for star-delta (weye-delta) starting

Both interlock and time functions are required for the assembly of star-delta (weye-delta) starters. With the function modules for star-delta (weye-delta) starting and the matching link modules for the main circuit, these starters can be assembled easily and with absolutely no errors.

The entire sequence in the control circuit is integrated in the snap-on modules. This covers:

- An adjustable star time t from 0.5 to 60 s
- A permanently set dead interval of 50 ms
- Electrical contacting of the contactors by means of coil pick-off (contact legs)
- Feedback of the switching state at the contactor using a mechanical switch position indicator (plunger)
- Electrical interlock between the contactors

These modules do not require their own terminals and can therefore be used for contactors with both screw and spring-loaded connection systems in all the sizes S00 to S3. To start the star-delta (weye-delta) starter, only the first of the three contactors (line contactor) is actuated, like in the case of a direct-on-line starter. All other functions then take place inside the individual modules.

This also offers advantages if the time function was previously implemented in a controller, as it again results in a significant reduction in the number of PLC outputs, the programming work and the wiring outlay.

The assembly kits for the main circuit include the mechanical interlock, the neutral bridge, the wiring modules at the top and at the bottom, and the required connectors or connecting clips.

A protective circuit (varistor) is integrated in the basic module.

The function modules for star-delta (weye-delta) starting are mostly used where current-limiting measures for starting a drive are required and a high level of availability is essential at the same time. This technology has been used with success for several decades and has the additional advantage of requiring relatively little know-how. Through the use of function modules, the assembly work with simple standard components is even easier and absolutely error-free.

The use of function modules for star-delta (weye-delta) starting results in the following advantages:

- Operation solely through the line contactor A1/A2 – no further control current wiring needed
- Prevention of wiring errors
- Reduction of testing costs
- Integrated electrical interlock saves costs and prevents errors
- Less space needed in the control cabinet compared to using a separate timing relay
- Adjustable starting in star mode from 0.5 to 60 s
- Independent of the contactor's control supply voltage (24 to 240 V AC/DC)
- Varistor integrated – no additive protective circuit required
- Mechanically coded assembly enables easy configuration and reliable wiring
- Fewer versions – one module kit for screw and spring-loaded connection systems and for all the contactor sizes S00 to S3
- Mechanical interlock (with wiring kit for the main circuit)

Assembly of star-delta (weye-delta) starters

We offer ready-made wiring kits for the assembly of star-delta (weye-delta) starters, see [page 3/104 onwards](#).

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > General data

SIRIUS 3RA27 function modules for IO-Link for mounting on 3RT2 contactors

See pages 3/76 and 3/99

The SIRIUS 3RA27 function modules enable the assembly of starters and contactor assemblies for direct-on-line, reversing and star-delta (wye-delta) starting without any additional, complicated wiring of the individual components. They include the key control functions required for the particular feeder, e.g. timing and interlock, and can be connected to the control system via IO-Link.

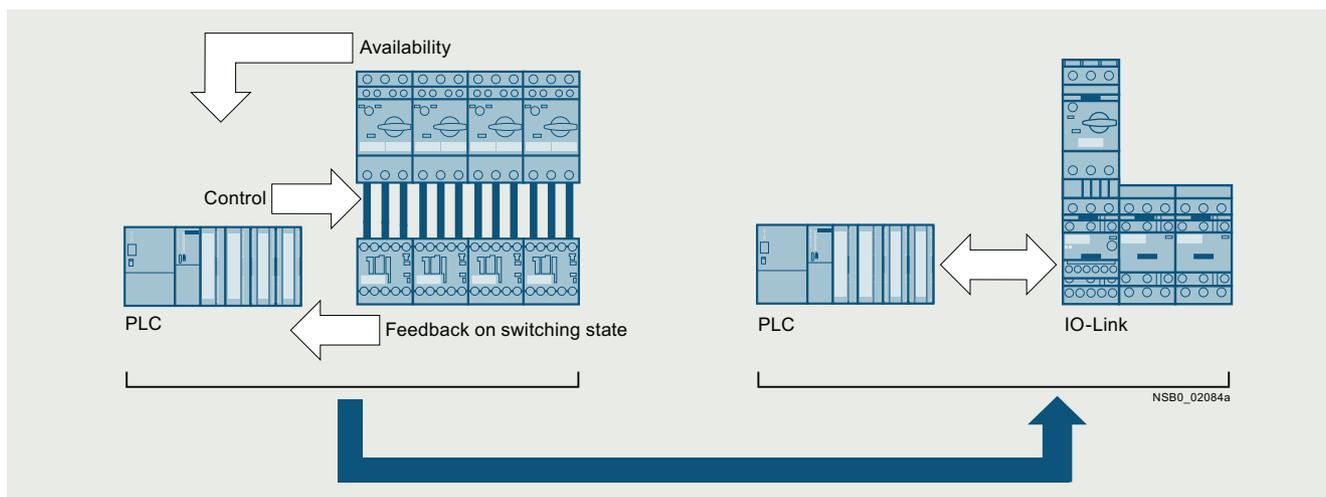

The electrical and mechanical connection to the contactor is established by snapping on and locking the respective modules. An additive protective circuit for the individual contactors can be dispensed with completely because a varistor is integrated in the modules. Feedback from the contactor contacts is performed with Hall sensors which provide reliable feedback on the switching state even under extremely dusty conditions.

The starters are connected to the higher-level control system through IO-Link, with the possibility of connecting up to four starters as a group to one port of the IO-Link master.

Through this type of connection to the control system, a maximum of wiring is saved.

The following essential signals are thus transmitted:

- Availability of the feeder in response to an indirect inquiry from the motor starter protector/circuit breaker
- Starter control
- Feedback on switching state of the starter

Signal transmission through IO-Link

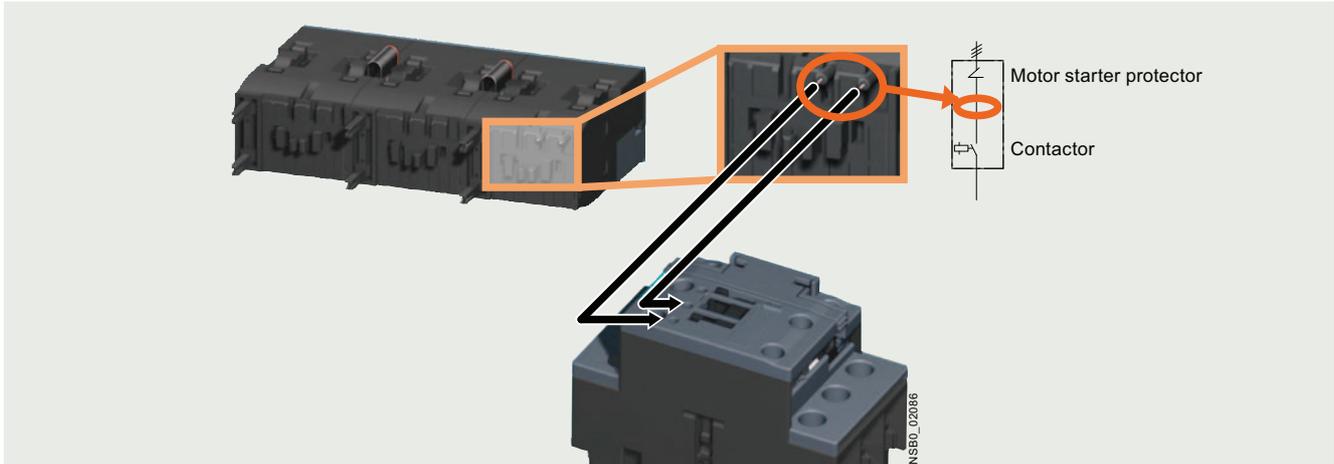

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > General data

The inquiry from the motor starter protector/circuit breaker does not take place through additive wiring between the auxiliary switch and the module but by means of a voltage inquiry at the contactor input.

This requires special versions of the 3RT20...-.....-0CC0 contactors with voltage tap in sizes S00 and S0 (see pages 3/50 and 3/54).

Availability signal through voltage tap

The following benefits result from the use of SIRIUS 3RA27 function modules:

- Reduction of the control current wiring to no more than three cables for four feeders
- Elimination of testing costs and wiring errors
- Reduction of configuration work
- Parameter server functionality
- Integration in TIA means unambiguous IO-Link diagnostics if a fault occurs
- Dispensing with IO modules saves space in the control cabinet
- All essential timing and interlock functions for reversing duty and star-delta (wye-delta) starting are integrated
- No additive protective circuit required

For more information on IO-Link, see [Industrial communication, page 2/1 onwards](#).

SIRIUS 3RA2711 function modules for IO-Link for mounting on 3RT2 contactors

By grouping up to four starters, it is possible to connect up to 16 starters to one master of the ET 200SP or S7-1200. In this case all the signals of the individual controls are made available directly in the process image of the input through only three individual wires per starter group. If the same potential is present

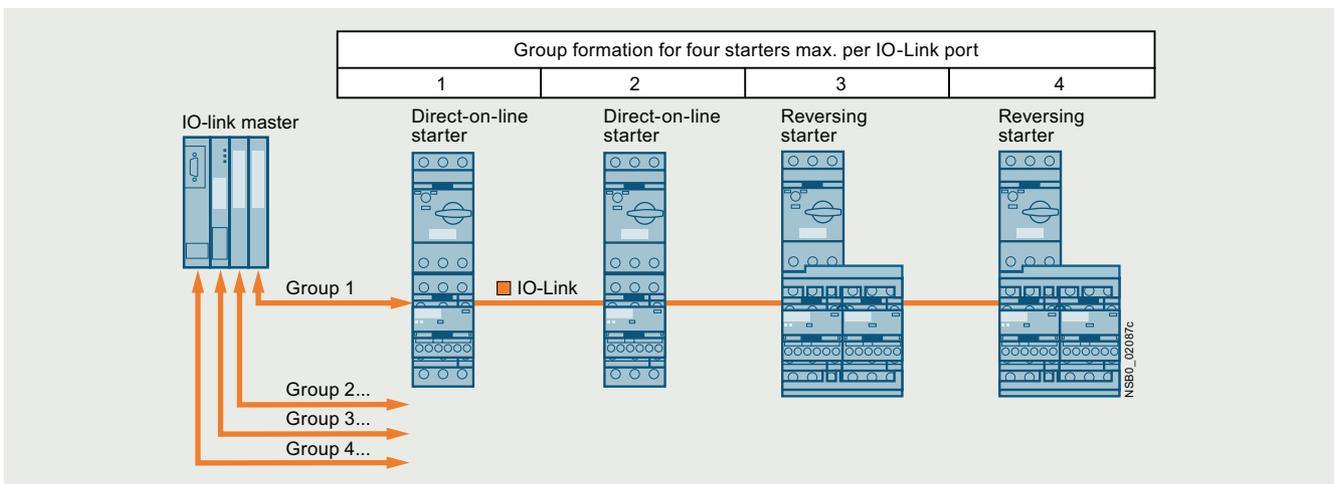

Protecting connections

The specifications for short-circuit protection (fuses, motor starter protectors/circuit breakers, or miniature circuit breakers) are available for the device connections of the main circuit and the auxiliary circuit.

In order to ensure a holistic view for the protection of the device connections, the manufacturer is obliged to provide all relevant information for short-circuit protection and overcurrent protection.

For more information, for example if device connections for the control supply voltage, the supply voltage, or digital inputs/digital outputs are not connected to self-limiting current sources or energy sources, see [Equipment Manual](#) or the [technical product data sheet](#).

at the ET 200SP or S7-1200 master and at the switching devices, the wiring can be further reduced by connecting the supply voltage of the contactor coils to the communication wires via jumpers.

Group formation with IO-Link

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > General data

In case of a malfunction, the corresponding error signals are also sent directly to the PLC in acyclic mode. This is in addition to transmission of the switching signals and status signals.

Possible error signals:

- Switching element defective
- No main voltage (MCB tripped)
- No control supply voltage
- End position on the right/on the left
- Manual mode
- Process mapping error

This easy integration of the starters in the TIA world does not limit the flexibility on site in the least. For example, all function modules have special terminals in order to enable direct local disconnection. These terminals can be connected for example to a position switch. The input interrupts the voltage supply to the contactor coil directly, i.e. without going through the PLC. These terminals are jumpered in the delivery state.

Local control of the complete starter group is also straightforward using a handheld device. The latter is easily connected to the last starter and can be mounted into the front plate of the control cabinet if required. This offers significant advantages particularly for commissioning.

SIRIUS function modules with IO-Link are used above all in machines and plants in which there are several motor feeders in one control cabinet. Using IO-Link, the connection of these feeders to the automation level is easy, quick and error-free. And with IO modules no longer needed, the width of the PLC is far smaller.

SIRIUS 3RC7 intelligent link modules

See page 3/102 and page 8/90 onwards

The 3RC7 intelligent link modules connect the 3RV2 motor starter protectors/circuit breakers and the 3RT2 contactors to form intelligent load feeders.

Available for size S00 and S0 direct-on-line and reversing starters with spring-loaded terminals.

Depending on the application, there is a choice of a Standard or High Feature version of the 3RC7 intelligent link module.

The 3RC7 intelligent link modules are connected to the SIMATIC ET 200SP via the flexible station extension (ET connection) using the BA-Send BusAdapter.

With the 3RC7 intelligent link module, the SIRIUS load feeder becomes part of the SIMATIC automation system.

Solid-state time-delay auxiliary switches for mounting on 3RT201 to 3RT204 contactors (sizes S00 to S3) and 3RH2 contactor relays (size S00)

Type		3RA2813	3RA2814	3RA2815
Function		ON-delay	OFF-delay with control signal	OFF-delay without control signal
General data				
Dimensions (basic unit with mounted solid-state time-delay auxiliary switch)		See 3RT2 contactors (pages 3/26, 3/29, 3/32, 3/35) and 3RH2 contactor relays (page 5/8)		
Rated insulation voltage U_i Pollution degree 3, overvoltage category III	V AC	300		
Rated impulse withstand voltage U_{imp}	kV AC	4		
Permissible ambient temperature				
• During operation	°C	-25 ... +60		
• During storage	°C	-40 ... +80		
Electromagnetic compatibility (EMC)		IEC 61000-6-2, IEC 61000-6-4, IEC 61812-1, IEC 60947-4-1		
Overvoltage protection		Varistor integrated		
Control				
Operating range of excitation		0.85 ... 1.1 x U_c , 0.95 ... 1.05 times the rated frequency		
Rated power	W	1		
• Power consumption at 230 V AC, 50 Hz	VA	2		
Recovery time	ms	150		
Minimum ON duration	ms	--	35	200
Setting accuracy , typ., with reference to upper limit of scale		± 15%		
Repeat accuracy , max.		± 1%		
Load side				
Rated operational currents I_e				
• AC-15 at 24 ... 250 V, 50 Hz	A	3		
• DC-13	- at 24 V - at 125 V - at 250 V	A A A	1 0.2 0.1	
Mechanical endurance	Operating cycles	10 x 10 ⁶		
Electrical endurance at AC-15, 250 V, 3 A	Operating cycles	100 000		
Residual current , max.	mA	--		
Voltage drop , max., when switched-through	VA	--		
Short-circuit protection				
• Fuse link, operational class gG: DIAZED, type 5SB	A	4		
Conductor cross-sections				
Connection type (1 or 2 conductors can be connected)		 Screw terminals		
• Solid	mm ²	1 x (0.5 ... 4), 2 x (0.5 ... 2.5)		
• Finely stranded with end sleeve (DIN 46228)	mm ²	1 x (0.5 ... 2.5), 2 x (0.5 ... 1.5)		
• AWG cables, solid or stranded	AWG	2 x (20 ... 14)		
• Terminal screws		M3 (for standard screwdriver size 2 or Pozidriv 2)		
• Tightening torque	Nm	0.8 ... 1.2		
Connection type (1 or 2 conductors can be connected)		 Spring-loaded terminals		
• Solid	mm ²	2 x (0.25 ... 1.5)		
• Finely stranded with end sleeve (DIN 46228)	mm ²	2 x (0.25 ... 1.5)		
• Finely stranded without end sleeve	mm ²	2 x (0.25 ... 1.5)		
• AWG cables, solid or stranded	AWG	2 x (24 ... 16)		
• Operating tool	mm	3.0 x 0.5

Coupling links for control by PLC

Type	3RH2924-1GP11		3RH2914-.GP11	
Mounting on contactors of size	S0		S00 to S3	
General data				
Standards	IEC 60947			
Rated insulation voltage U_i (pollution degree 3)	V	300		
Protective separation between coil and contacts according to IEC 60947-1, Annex N	V AC	Up to 300		
Permissible ambient temperature				
• During operation	°C	-25 ... +60		
• During storage	°C	-40 ... +80		
Control side				
Rated control supply voltage U_c	V DC	24		
Operating range	V DC	17 ... 30		
Power consumption at U_c	W	0.5		
Nominal current input	mA	20		
Release voltage	V	≥ 4		
Function display	Yellow LED			
Protective circuit	Varistor			
Load side				
Mechanical endurance	Operating cycles	20 million	10 million	
Electrical endurance at I_e	Operating cycles	0.1 million		
Switching frequency	1/h	5 000		
Make-time	ms	Approx. 7		
Break-time	ms	Approx. 4		
Bounce time	ms	Approx. 2		
Contact material	AgSnO ₂			
Switching voltage	V AC/DC	24 ... 250		
Rated operational current I_e				
• AC-15 at 230 V	A	3		
• DC-13 at 230 V	A	0.1		
Permissible residual current of the electronics (with 0 signal)	mA	2.5		
Conductor cross-sections				
Connection type (1 or 2 conductors can be connected)		 Screw terminals		
• Solid	mm ²	2 x (0.5 ... 2.5)		
• Finely stranded with end sleeve (DIN 46228)	mm ²	2 x (0.5 ... 1.5)		
• Terminal screws		M3		
Connection type (1 or 2 conductors can be connected)		 Spring-loaded terminals		
• Solid	mm ²	--	2 x (0.25 ... 1.5)	
• Finely stranded with end sleeve (DIN 46228)	mm ²	--	2 x (0.25 ... 1.5)	
• Finely stranded without end sleeve	mm ²	--	2 x (0.25 ... 1.5)	
• AWG cables, solid or stranded	AWG	--	2 x (24 ... 16)	
• Operating tool	mm	--	3.0 x 0.5

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > Auxiliary switches, instantaneous

Overview

Auxiliary switch: Terminal designations and identification numbers for auxiliary contacts

Terminal designations

The terminal designations are 2-digit, e.g. 13, 14, 21, 22:

- Tens digit: Sequence digit
 - Related terminals have the same sequence digit
- Units digit: Function number
 - 1-2 for normally closed contacts (NC)
 - 3-4 for normally open contacts (NO)

Identification numbers

The identification number indicates the number and type of the auxiliary contacts, e.g. 40, 31, 22, 13:

- 1st digit: number of normally open contacts (NO)
- 2nd digit: number of normally closed contacts (NC)

Examples:

- 31 = 3 NO + 1 NC
- 40 = 4 NO

Selection aid for attachable auxiliary switches for power contactors and contactor relays

The auxiliary switches of the 3RH29 series for mounting on the front and side can be used for 3RT2 power contactors as well as for 3RH2 contactor relays.

The possible combinations of basic unit and mounted auxiliary switch can be found in the tables, [see the following pages](#).

Where the columns and lines intersect (blue or green in the example) you will find the identification number for the combination of basic unit (column) and auxiliary switch (line).

¹⁾ For detailed information on use, see pages 3/78 and 3/79.

²⁾ In the case of 3RT2.1 contactors and 3RH2 contactor relays (size S00), full use of the auxiliary switch 3RH2911-FA04 (4 NC) depends on the basic unit. In this case the basic unit must contain a normally open auxiliary contact. A maximum of four NCs (basic unit auxiliary contacts and attachable auxiliary switch contacts) are allowed.

³⁾ In the case of 3RT2.2, 3RT2.3 and 3RT2.4 contactors (sizes S0 to S3), full use of the auxiliary switch 3RH2911-FA04 (4 NC) is not possible. Only up to three normally closed auxiliary contacts of the auxiliary switch plus the 3RT2 normally closed auxiliary contact can be used here.

¹⁾ AC voltage values apply for 50 and 60 Hz.

²⁾ The solid-state time-delay auxiliary switches are also available as 3RA28 function modules for mounting on 3RT2 contactors and 3RH2 contactor relays, see page 3/98.

³⁾ Cannot be fitted onto coupling contactors and coupling contactor relays.

⁴⁾ From product version E04 onwards, 3RA281. solid-state time-delay auxiliary switches can be used for 3RT2.4 contactors.

⁵⁾ Setting of output contacts in as-supplied state not defined (bistable relay). Application of the control supply voltage once results in contact changeover to the correct setting.

Technical specifications, see page 3/73.

Screw terminals	Spring-loaded terminals
-----------------	-------------------------

¹⁾ Use of the 3RA2923-2AA1 assembly kit in conjunction with 3RT202.-.....-3MA0 contactors is limited because the auxiliary switches in the basic unit are not allowed to be used on account of the permanently mounted auxiliary switch.

²⁾ Version in size S0 with spring-loaded terminals:
Only the wiring modules for the main circuit are included.
No connecting clips are included for the auxiliary and control circuit.

³⁾ Version in sizes S2 and S3 with spring-loaded terminals in the auxiliary and control circuits: Only the wiring modules for the main circuit are included. A cable set is included for the auxiliary circuit.

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

SIRIUS 3RT12 and 3TF6 vacuum contactors

Overview

3RT12 and 3TF6 vacuum contactors

Our power range of vacuum contactors for switching IE2 motors and highly efficient IE3 and IE4 motors:

- Sizes S10 and S12: 3RT12 to 250 kW
- Size 14: 3TF6 to 450 kW

See page 3/123 onwards

Standards

IEC 60947-1, IEC 60947-4-1, IEC 60947-5-1 (auxiliary switches)

Terminal covers may have to be fitted onto the connecting bars, depending on the configuration with other devices (see pages 3/112 and 3/127).

Operating conditions

Vacuum contactors are basically unsuitable for switching DC voltage. Vacuum contactors are approved for use exclusively **for applications in the 45 to 60 Hz frequency range**. Help with applications > 60 Hz is available from our Technical Support, www.siemens.com/support-request.

Protecting connections against short circuit, overload and overvoltage

Appropriate steps must always be taken to protect device connections from overload and short circuit. There are different constraints depending on the type of connection:

Short-circuit and overload protection of main connections

For information on the protection of a free-standing contactor, see the [technical product data sheet](#).

For more information on device combinations such as contactor with overload relay or contactor with motor starter protector/circuit breaker as motor feeder, see

- [Digital Configuration Manual for load feeders](#)
- [Configuration Manual for load feeders](#)

Short-circuit and overload protection of auxiliary connections

For information on the protection of auxiliary contacts, see the [technical product data sheet](#).

Short-circuit and overload protection of control supply voltage or supply voltage connections

First of all, the relevant standards and regulations for configuring control cabinets and the parts and components installed in them must be taken into account, for example for cable dimensioning.

One possible protection for these circuits could be the selection of a suitable power supply, i.e. one with a current-limiting function. In the selection of the source and the connecting cable, the load characteristics of the contactor must be considered (short-time inrush current peaks for solid-state contactor operating mechanisms, switch-on power, holding power). The same applies to the selection of suitable protective devices.

If there are further switching elements in the circuit, such as the auxiliary contact system of an overload relay that operates the contactor, the short-circuit protection necessary for this must also be considered.

For further recommendations, e.g. the use of miniature circuit breakers or circuit breakers for equipment in control circuits, see [Control panel tip – Selecting and dimensioning suitable power supplies quickly and reliably](#).

Short-circuit and overload protection of contactors with digital input

A typical rated current of 20 mA applies to these inputs based on the PLC input types according to IEC 60947-4-1.

These inputs can be protected accordingly (for 3RT12...-N contactors marked with IN+/IN-).

The supply voltage connections A1 - A2 must be protected according to the load characteristics.

For information about power consumption, see the [technical product data sheet](#).

Overvoltage protection at the control supply voltage connection

The 3RT12 and 3TF6.44 contactors are already equipped with coil damping (varistor).

Note:

The break times of the contactor, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase with damping.

For more detailed information about how damping affects the time response, see [Equipment Manual](#).

Protection from overvoltage in the main circuit

The 3RT12 and 3TF6 vacuum contactors can be retrofitted with varistors for damping switching overvoltages in the motor.

The 3TF6 contactors have integrated damping depending on the version.

Note:

When 3TF6 contactors are used **in an environment with frequency converters**, the overvoltage damping (if available) must be removed. For more information, see [Equipment Manual](#).

Connection methods

Main circuit

3RT12 vacuum contactors are available with busbar connections. Box terminal blocks can be ordered separately as accessories for versions with screw terminals, see page 3/127.

The 3TF6 vacuum contactors are available with busbar connections.

Auxiliary and control circuit

The 3RT12 and 3TF6 contactors are available with screw terminals.

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

SIRIUS 3RT12 and 3TF6 vacuum contactors

Motor protection

3RB2 electronic overload relays (see pages 7/99, 7/101 and 7/103) can be mounted on the 3RT12 vacuum contactors for protection against overload.

Electromagnetic compatibility (EMC)

The contactors satisfy the conditions for environment A according to IEC 60947-1.

Contact reliability of the auxiliary contacts

If voltages ≤ 110 V and currents ≤ 100 mA are to be switched, the auxiliary contacts of the vacuum contactors or 3RH contactor relays should be used as they guarantee a high level of contact reliability.

These auxiliary contacts are particularly suitable for solid-state circuits with currents ≥ 1 mA at a voltage ≥ 17 V.

Vacuum interrupters

3RT12 vacuum contactors

The contact gaps of the vacuum contactors are contained in hermetically enclosed vacuum interrupters unlike the 3RT10 contactors – the main contacts operate in air under atmospheric conditions. The particular benefit of vacuum contactors, however, is that their electrical endurance is significantly higher.

They are especially suited to frequent switching in inching-/mixed operation, e.g. in crane control systems.

3TF6 vacuum contactors

The switching contacts of the vacuum contactors are contained in hermetically encapsulated vacuum interrupters.

With these contactors, the contact erosion of the vacuum interrupters can be checked in the energized state with the help of three white double slides below the connecting bars on the outgoing side.

Operating mechanism types

3RT12 vacuum contactors

The contactors can be operated with AC (50 to 60 Hz) as well as with DC. Two types of solenoid operation are available:

- Standard operating mechanism for AC and DC operation (power consumption reduced from closing power to holding power), version 3RT12...-**A**
- Solid-state operating mechanism, version 3RT12...-**N**

3TF6 vacuum contactors

- Standard version 3TF6.44-**C.7** with AC operation
- 3TF6.33-**D.4** contactors with DC control are supplied with a 3TC4417-4A.. reversing contactor and a series resistor.

Replacing operating mechanisms

3RT12 vacuum contactors

The operating mechanisms of the vacuum contactors are removable and can be replaced simply by unlocking and pulling them out.

3TF6 vacuum contactors

It is also possible to replace the operating mechanism components of the vacuum contactor.

Fitting auxiliary contacts and mounting additional auxiliary switches

Features in the delivery state

- 3RT12 vacuum contactors:
These contactors are supplied with two laterally mounted auxiliary switches with two contacts each (2 NO + 2 NC)
- 3TF6 vacuum contactors:
These contactors are supplied with four laterally mounted auxiliary switches with two contacts each (4 NO + 4 NC). For operating mechanism versions with 3TC series contactor, two auxiliary contacts are already defined (3 NO + 3 NC).

Expansion possibilities

- 3RT12 vacuum contactors:
All basic devices can be expanded via auxiliary switches. The permitted configuration must be taken into account.
- Vacuum contactor 3TF6:
These devices are already fully equipped and no expansion is possible.

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

3TG10 power relays/miniature contactors

Overview

Standards

IEC 60947-1, IEC 60947-4-1, IEC 60947-5-1

Version

The 3TG10 power relays/miniature contactors are available with screw terminals or 6.3 mm x 0.8 mm flat connectors.

The 3TG10 miniature contactors are characterized by their width of just 36 mm.

Protecting connections against overvoltage

The 3TG10 power relays/miniature contactors have an integrated protective circuit against switching overvoltages.

Application

Because they are hum-free they are suitable for use in household appliances and distribution boards in office and residential areas.

They can also be used for applications where there is little space, such as air conditioners, heating systems, pumps and fans, i.e. for simple electrical controls.

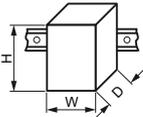

Technical specifications

FAQs, see <https://support.industry.siemens.com/cs/ww/en/ps/16186/faq>

Type	3TG10	
General data		
Dimensions (W x H x D)		mm 36 x 56 x 56
Endurance		
• Mechanical	Operating cycles	3 million
• Electrical		
- AC-1 at I_e	Operating cycles	0.1 million
- AC-3/AC-3e at I_e	Operating cycles	0.4 million
Rated insulation voltage U_i (pollution degree 3)	V	400
Rated impulse withstand voltage U_{imp}	kV	4
Protective separation Between the coil and the contacts according to IEC 60947-1, Annex N	V	Up to 300
Permissible ambient temperature		
• During operation ¹⁾	°C	-25 ... + 55
• During storage	°C	-50 ... + 80
Short-circuit protection		
Fuse links , operational class gG: LV HRC, type 3NA; DIAZED, type 5SB; NEOZED, type 5SE according to IEC 60947-4-1		
• Type of coordination "1"	A	25
• Type of coordination "2"	A	10
Miniature circuit breakers , C characteristic	A	10
Control		
Solenoid coil operating range		0.85 ... 1.1 x U_c
Power consumption of the solenoid coils (for cold coil and 1.0 x U_c)		
• AC operation, 45 ... 450 Hz	VA	4.4
- P.f.		0.9 (hum-free)
• DC operation	W	4
Rated data of the main contacts		
Load rating with AC		
Utilization category AC-1		
• Rated operational current I_e up to 400 V at 55 °C ¹⁾	A	20 for screw terminals, 16 for flat connectors
• Rated power U_e for three-phase loads with p.f. = 1, 230/220 V		
- For screw terminals	kW	7.5 (13 at 400 V)
- For flat connectors	kW	6 (10 at 400 V)
• Minimum conductor cross-section for loads with I_e	mm ²	2.5

¹⁾ If the three main conducting paths carry a load of 20 A, the following applies if $I > 10$ A in the fourth conducting path: Permissible ambient temperature 40 °C.

Switching devices – Contactors and contactor assemblies – for switching motors

Power contactors for switching motors

3TG10 power relays/miniature contactors

Type	3TG10			
Rated data of the main contacts (continued)				
Load rating with AC				
Utilization category AC-3 and AC-3e				
• Operational current for AC-3/AC-3e at $U_g \leq 400$ V rated value		A		8.4/6.4
• Rated power for slip-ring or squirrel-cage motors for AC-3/AC-3e, at 50 and 60 Hz and at $U_g \leq 400$ V		kW		4/3
Utilization category AC-5a (permissible grid impedance: $\geq 0.5 \Omega$)				
Switching of gas discharge lamps				
Per main conducting path at 230 V, 50 Hz				
	Rated power per lamp	Rated operational current per lamp

SiePortal, see www.siemens.com/product_catalog_siep?3RA23_3RT1

Conversion tool, see www.siemens.com/conversion-tool

TIA Selection Tool Cloud (TST Cloud), see www.siemens.com/tstcloud/?node=LoadFeeder

Guide of use for contactors in safety applications, see <https://support.industry.siemens.com/cs/ww/en/view/109807687>

The 3RA23 reversing contactor assemblies in sizes S00 to S3 can be ordered as follows:

- Fully wired and tested, with mechanical and electrical interlock, see [page 3/142 onwards](#).
- For all individual parts for customer assembly, see [page 3/66 onwards](#).

The 3RA23 reversing contactor assemblies have screw terminals or spring-loaded terminals (main and control current) and are suitable for screw and snap-on mounting on TH 35 DIN rails.

Complete 3RA23 reversing contactor assemblies

The 3RA23 reversing contactor assemblies of sizes S00 to S3 each consist of two contactors with the same power, with one NC contact (S00) or one NO contact and one NC contact (S0 to S3) in the basic unit. The contactors are mechanically and electrically interlocked (NC contact interlock).

3RU2 overload relays (see [page 7/86 onwards](#)) or 3RB3 overload relays (see [pages 7/98, 7/100 and 7/102](#)) for mounting on contactors or stand-alone installation, SIMOCODE pro 3UF7 motor management and control devices (see [page 10/11 onwards](#)) or 3RN2 thermistor motor protection relays (see [page 10/133 onwards](#)) can be used for motor protection.

Switching devices – Contactors and contactor assemblies – for switching motors

Reversing contactor assemblies

SIRIUS 3RA23 reversing contactor assemblies, up to 55 kW

Benefits

Using wiring kits for reversing contactor assemblies has the following advantages:

- Notable reduction of wiring in the control circuit
- Integrated mechanical interlock for sizes S00 to S3
- Prevention of wiring errors in the main circuit

Connecting combs for screw connection systems result in:

- Prevention of wiring errors in the control circuit
- Reduction of testing costs
- Ready-jumpered actuation of the auxiliary switches and the frame (A2)
- Integrated electrical interlock

Accessories

Selecting the auxiliary switches

The following points should be noted:

Size S00

- For maintained-contact operation:
Use contactors with an NC contact in the basic unit for the electrical interlock.
- For pushbutton switch control:
Use contactors with an NC contact in the basic unit for the electrical interlock; in addition, an auxiliary switch with at least one NO contact for self-locking is required per contactor.

Sizes S0 to S3

- For maintained-contact operation:
The contactors have two integrated auxiliary contacts (1 NO contact + 1 NC contact); the NC contact can be used for electrical interlock.
- For pushbutton switch control:
Electrical interlock as for maintained-contact operation; the NO contact in the basic unit can be used for the self-locking.

Surge suppression

Sizes S00 to S3

All reversing contactor assemblies can be fitted with RC elements or varistors for damping switching overvoltages in the coil.

As with the individual contactors, the surge suppressors can either be plugged onto the top of the contactors (S00) or be plugged into the front of the contactors (S0 to S3).

Technical specifications

Switching devices – Contactors and contactor assemblies – for switching motors

Reversing contactor assemblies

Reversing contactor assemblies consisting of SIRIUS 3RT1 and 3TF6 contactors, up to 335 kW

Overview

The individual parts for the reversing contactor assemblies for customer assembly must be ordered separately.

- 3RT1 contactors (see page 3/61 onwards) and 3RT12 and 3TF6 vacuum contactors (see page 3/123 onwards):
The operating times of the individual contactors are rated in such a way that no overlapping of the contact connection and the arcing time between two contactors can occur on reversing, provided they are interlocked by way of their auxiliary switches (NC contact interlock) and the mechanical interlock.
For assemblies with AC operation and 50/60 Hz, a dead interval of 50 ms must be provided when used with voltages over 500 V; a dead interval of 30 ms is recommended for use with voltages up to and including 400 V. These dead times do not apply to assemblies with DC operation.
The operating times of the individual contactors are not affected by the mechanical interlock.
- Mechanical interlocks
 - 3RT1 contactors: see page 3/108
 - 3TF68 vacuum contactors: Locking device for mechanical interlock, see page 3/128.
- Wiring kits consisting of link rails on the top and bottom
 - 3RT1 contactors: see page 3/106
 - 3TF68 vacuum contactors: see page 3/128
- Base plates
 - 3RT1 contactors: see page 3/113
 - 3TF68 vacuum contactors: see page 3/128

Additional components

- For pushbutton switch control: auxiliary switch (NO contact) for self-locking
- 3RB2 overload relays (see pages 7/99, 7/101 and 7/103), SIMOCODE pro 3UF7 motor management and control devices (see page 10/11 onwards) or 3RN2 thermistor motor protection relays (see page 10/133 onwards) can be used for overload protection.

Star-delta (wye-delta) combinations

SIRIUS 3RA24 star-delta (wye-delta) combinations, up to 90 kW

Overview

More information

Homepage, see www.siemens.com/sirius

SiePortal, see www.siemens.com/product_catalog_siep?3RA24_3RT

Conversion tool, see www.siemens.com/conversion-tool

TIA Selection Tool Cloud (TST Cloud), see www.siemens.com/tstcloud/?node=LoadFeeder

Guide of use for contactors in safety applications, see <https://support.industry.siemens.com/cs/ww/en/view/109807687>

The 3RA24 star-delta (wye-delta) combinations in sizes S00 to S3 can be ordered as follows:

- Fully wired and tested, with electrical and mechanical interlock, see [page 3/160 onwards](#).
- For all individual parts for customer assembly, see [page 3/66 onwards](#).

The 3RA24 star-delta (wye-delta) combinations have screw terminals or spring-loaded terminals and are suitable for screw and snap-on mounting on TH 35 DIN rails.

A base plate is also available for the size S2 and S3 assemblies.

A dead interval of 50 ms is already integrated in the 3RA28 function module for star-delta (wye-delta) starting.

With the fully wired and tested 3RA24 star-delta (wye-delta) combinations, the auxiliary contacts included in the basic units are unassigned.

The 3RA24 star-delta (wye-delta) combinations are designed for standard applications.

Note:

Star-delta (wye-delta) combinations in special applications such as very heavy starting¹⁾ or star-delta (wye-delta) starting of special motors must be customized. Help with designing such special applications is available from our Technical Support, www.siemens.com/support-request.

¹⁾ For effective assistance from Technical Support, you must provide the following details:

- Rated motor voltage,
- Rated motor current,
- Service factor, operating values,
- Motor starting current factor,
- Starting time,
- Ambient temperature.

Surge suppression

Surge suppression (varistor) is included in the 3RA28 function modules for star-delta (wye-delta) starting.

Motor protection

3RU2 overload relays (see [page 7/86 onwards](#)) or 3RB3 overload relays (see [pages 7/98, 7/100 and 7/102](#)) for mounting on contactors or stand-alone installation, SIMOCODE pro 3UF7 motor management and control devices (see [page 10/11 onwards](#)) or 3RN2 thermistor motor protection relays (see [page 10/133 onwards](#)) can be used for motor protection.

The overload relay can either be mounted on the line contactor or fitted separately. It must be set to 0.58 times the rated motor current.

SIRIUS 3RA28 function module for star-delta (wye-delta) starting

The 3RA2816-0EW20 star-delta (wye-delta) function module (see [page 3/98](#)) replaces the complete wiring in the control circuit and can be used in the voltage range from 24 to 240 V AC/DC. It is snapped onto the front of the star-delta (wye-delta) combination size S00, S0, S2 or S3.

One function module comprises a complete module kit:

- Basic module with integrated control logic and time setting
- Two coupling modules with corresponding connecting cables

The scope of supply thus comprises a complete module kit for one star-delta (wye-delta) combination in size S00, S0, S2 or S3, regardless of the connection method.

Data of the control circuit:

- Wide voltage range 24 to 240 V AC/DC
- Time range 0.5 to 60 s (3 selectable settings)
- Dead interval of 50 ms, permanently set

Switching devices – Contactors and contactor assemblies – for switching motors

Star-delta (wye-delta) combinations

SIRIUS 3RA24 star-delta (wye-delta) combinations, up to 90 kW

Complete device combinations

Note:

The selection of contactor types refers to fused designs.

Representation of the complete star-delta (wye-delta) combination with optionally mountable accessories, see page 3/156.

Switching devices – Contactors and contactor assemblies – for switching motors

Star-delta (wye-delta) combinations

Star-delta (wye-delta) combinations consisting of SIRIUS 3RT and 3TF6 contactors, up to 710 kW

Overview

The individual parts for the star-delta (wye-delta) combinations for customer assembly must be ordered separately.

- 3RT contactors (see page 3/61 onwards) and 3RT12 and 3TF6 vacuum contactors (see page 3/128 onwards):

The operating times of the individual contactors are rated in such a way that no overlapping of the contact connection and the arcing time between two contactors can occur on reversing, provided they are interlocked by way of their auxiliary switches (NC contact interlock) and the mechanical interlock.

For assemblies with AC operation and 50/60 Hz, a dead interval of 50 ms must be provided when used with voltages over 500 V; a dead interval of 30 ms is recommended for use with voltages up to and including 400 V. These dead times do not apply to assemblies with DC operation.

The operating times of the individual contactors are not affected by the mechanical interlock.

- Mechanical interlocks
 - 3RT contactors and 3RT12 vacuum contactors: Adapter and mechanical interlock to interlock S6 and S3, see page 3/108.
 - 3TF68 vacuum contactors: Locking device for mechanical interlock, see page 3/128.
- Wiring kits consisting of link rails and neutral bridges
 - 3RT contactors and 3RT12 vacuum contactors: see page 3/106 onwards
 - 3TF68 vacuum contactors: see page 3/128
- Base plates
 - 3RT contactors and 3RT12 vacuum contactors: see page 3/113
 - 3TF68 vacuum contactors: see page 3/128

Additional components

- For pushbutton switch control: auxiliary switch (NO contact) for self-locking
- 3RB2 overload relays (see pages 7/99, 7/101 and 7/103), SIMOCODE pro 3UF7 motor management and control devices (see page 10/11 onwards) or 3RN2 thermistor motor protection relays (see page 10/133 onwards) can be used for overload protection.
The overload relay can either be mounted on the line contactor or separately fitted. It must be set to 0.58 times the rated motor current.
- Optional surge suppression for the S3 contactors; the contactors in sizes S6 to S12 are wired as standard with varistors.

The star-delta (wye-delta) combinations for customer assembly are designed for standard applications.

Note:

Star-delta (wye-delta) combinations in special applications such as very heavy starting¹⁾ or star-delta (wye-delta) starting of special motors must be customized. Help with designing such special applications is available from our Technical Support, www.siemens.com/support-request.

¹⁾ For effective assistance from Technical Support, you must provide the following details:

- Rated motor voltage,
- Rated motor current,
- Service factor, operating values,
- Motor starting current factor,
- Starting time,
- Ambient temperature.
