

End-to-end safety for user and systems

Assembly or maintenance: work on electrical installations and devices must be made sufficiently safe to prevent accidents or harm. The safety of the operating personnel is paramount.

To ensure this, it is necessary to be able to disconnect the installation safely from the power supply. Siemens switch disconnectors permit permanent switch-on and switch-off under a load and thus protect the user from electric shock. They also prevent unauthorized switching on of machines.

The devices are easy to install and can be quickly put into operation. Additional functions can be retrofitted at any time – thanks to the modular design of the devices and a comprehensive range of accessories.

Convenient ordering processes and fast delivery optimize stock-keeping and save you time and money. You can also make use of our CAx data for automated, simplified planning and configuring.

Further information

From page 8/6

From page 2/1

¹⁾ According to DIN VDE 0100-200, functional switching is an operation intended to switch on or off or vary the supply of electric energy to an electrical installation or parts of it for normal operating purposes.

²⁾ Devices for occasional switching usually have a substantially lower electrical endurance and are switched no more than 1 × per minute in the tests.

³⁾ Pure switching without protection function

3LD switch disconnectors

System overview of 3LD2 switch disconnectors

Basic units for front mounting

3P rotary operating mechanisms

3P knob-operated mechanisms (3LD23/3LD24)

3P knob-operated mechanisms

3P+N rotary operating mechanisms

3P+N knob-operated mechanisms (3LD23/3LD24)

3P+N knob-operated mechanisms

6P rotary operating mechanisms

Basic units for floor mounting

3P rotary operating mechanisms

3P knob-operated mechanisms (3LD23/3LD24)

3P knob-operated mechanisms, defeatable

3P+N rotary operating mechanisms

3P+N knob-operated mechanisms (3LD23/3LD24)

3P+N knob-operated mechanisms, defeatable

6P rotary operating mechanisms

Basic units for installation in distribution boards/enclosures, DC

3P knob-operated mechanisms

3P+N knob-operated mechanisms

8P DC isolators

Additional poles and auxiliary switches

N switching contacts

N/PE terminals (through-type)

Auxiliary switches (standard version)

Auxiliary switch for mounting on the front

Operating mechanisms

Rotary operating mechanisms for 4-hole and center-hole mounting

Knob-operated mechanisms (3LD23/3LD24)

Switch shafts

Coupling pieces without ON-lock

Assembly tools for center-hole mounting

Further accessories

Terminal covers, 1-pole

Terminal covers, 3 and 4-pole

Inscription labels (with and without inscription)

Note:

You will find a detailed range of accessories with the basic units.

Mounting concept and accessories

Mounting types

Front mounting

The switches for front mounting are mounted on the inside of covers, side panels or, if applicable, control cabinet doors (depending on the applicable standard and switching function). In addition to the 4-hole fastening of the handle, up to 63 A (3LD25) fastening with the 22.5 mm diameter center hole can also be chosen.

You will find further information under:
sie.ag/2UlrAvy

Floor mounting

The switches for floor mounting up to 125 A (3LD28) are snapped onto 35 mm DIN rails according to EN 60715 or screw-mounted on mounting panels. The switches for 160 and 250 A (3LD23/3LD24) are exclusively screwed onto mounting panels. The actuators are connected to the lower section of the switch through a door coupling, which can be released in the 0 position, and a 300 mm long switch shaft. When the control cabinet door is open, the switch can be protected against inadvertent operation by removing the switch shaft from the lower section of the switch. The overall depth can be adapted to individual requirements by adjusting the switch shaft length.

Distribution board mounting

The switches for distribution board mounting are suited for operation in distribution boards and for switching inside control cabinets or distributors. Up to 125 A (3LD28), they have cap and mounting dimensions according to DIN 43880 and can be fitted under the same cover together with miniature circuit breakers.

DC isolators

The DC isolators in the enclosure are suitable for disconnecting loads of up to 800 V DC due to their 8-pole design. To provide additional safety, the isolators can be locked in the 0 position.

DC isolators, 50 kA_{rms}

Number of poles

8P

A schematic diagram of an 8-pole switch mechanism. It shows two vertical lines on the left and right, each with a dot at the top. Between them are four vertical lines, each with a horizontal bar at the top. These horizontal bars are connected to a common horizontal line at the bottom, which has a small circle in the center.

Mounting concept and accessories

Mounting types

3LD2 main control and EMERGENCY-STOP switches in enclosure

For surface mounting of individual main control and EMERGENCY-STOP switches, molded plastic-enclosed switches with degree of protection IP65 are used. The molded-plastic enclosures each contain an N and/or a PE terminal. As the switches can be locked in the 0 position, they can also be used as maintenance and repair switches.

DC isolators in enclosure

The DC isolators in the enclosure are suitable for disconnecting loads of up to 800 V DC due to their 8-pole design. To provide additional safety, the isolators can be locked in the 0 position.

3LD2 maintenance and repair switches with EMC shield plate

The 3LD2 maintenance and repair switch with EMC shield plate is ideal for use between converter and motor. A long leading (20 ... 150 ms) NO contact switches the converter group off before the main contacts of the switch open. This produces an AC20 state. The cable shield can be contacted over a large area inside the enclosure using the shield clamps or hose clips included in the scope of delivery.

The switch series provides the greatest possible safety for the user and can be locked in the 0 or I position. Tests have been performed in connection with SINAMICS converters and ratings are available for use at frequencies 0 ... 550 Hz.

8

Main control switches acc. to UL

The certification according to UL 489 makes the 3LD5 UL ideal for use as a main control switch for machinery and plants for export to the NAFTA states. The variety of accessories makes it especially suitable as a main disconnect switch for industrial machinery. The switch is also certified according to UL 508 and can also be used as a manual motor controller.

Mounting types

Front mounting of basic units

The switches for front mounting are mounted on the inside of covers, side panels or, if applicable, control cabinet doors (depending on the applicable standard and switching function). Installation is achieved by 4-hole mounting of the handle. This switch is especially suitable when door interlocking is not required or is implemented in a different way.

Floor mounting with direct operating mechanism

The switches for floor mounting with direct operating mechanism up to 60 A are snapped onto 35 mm DIN rails according to EN 60715 or screw-mounted on mounting panels. The switches for 100 ... 160 A (3LD54 ... 3LD58) are exclusively screwed onto mounting panels.

Basic units, floor mounting with door-coupling rotary operating mechanism

The switches for floor mounting up to 30 A (3LD50) are snapped onto 35 mm DIN rails according to EN 60715 or screw-mounted on mounting panels. The switches for 100 to 160 A (3LD54 ... 3LD58) are exclusively screwed onto mounting panels. The actuators are connected to the lower section of the switch through a door coupling, which can be released in the 0 position, and a 300 mm long switch shaft. The rotary operating mechanisms are also defeatable, i.e. it is possible to open the control cabinet door with a deliberate action while the switch is in the ON position. To meet the requirement acc. to UL 508A/NFPA 79, a supplementary handle can be mounted on the switch. Combined with the intermediate handle, the shaft can no longer be removed.

Note:

You will find a detailed range of accessories with the basic units.

Types of mounting

Floor mounting

All 3KD switch disconnectors are designed for floor mounting. To ensure that the switch can be flexibly adapted to the relevant installation conditions, the mounting bracket can be rotated through 90° with size 3 or larger.

You will find further information under:
sie.ag/2UlrAvy

DIN rail

Frame sizes 1 and 2 of the 3KD can be snapped onto a DIN rail (TH35 according to EN 60715) as an alternative mounting method.

Legend

- (1) Neutral conductor terminal
- (2) N/PE terminal
- (3) 4th contact element¹⁾
- (4a) Auxiliary switch module for auxiliary switches, standard version²⁾
- (5) Auxiliary switch
- (6) Phase barrier³⁾
- (7) Terminal cover³⁾
- (9) Door-coupling rotary operating mechanism

¹⁾ Only for 3-pole 3K
²⁾ Max. 1× per switch, requires at least 1× auxiliary switch (5)
³⁾ Only for size 2, flat terminals

Diagram illustrating the connection of a 3-pole 3K switch with 4x auxiliary switches. The diagram shows the switch assembly, terminal cover, and auxiliary switches connected to the main switch terminals. The legend defines the symbols used in the diagram:

- ① Neutral conductor terminal
- ② N/PE terminal
- ③ 4th contact element ¹⁾
- ⑤ Auxiliary switch ²⁾
- ⑥ Phase barrier
- ⑦ Terminal cover
- ⑨ Door-coupling rotary operating mechanism

¹⁾ Only for 3-pole 3K
²⁾ Up to 4x auxiliary switches ⑤

Scope of supply:

- Incl. phase barriers on the input and output side for size 2 with flat terminals
- Terminal covers must be ordered separately for switch disconnectors with flat terminals and direct operating mechanisms

Mounting:

- The switch disconnectors are designed for floor mounting and the sizes 1 and 2 can optionally also be mounted on DIN rails

Note:

- The complete units with a direct operating mechanism are not suitable for conversion to door-coupling rotary operating mechanisms; the basic units are to be used for this purpose
- All basic units without handles are suitable for use with door-coupling rotary operating mechanisms, from size 1 to size 5 these can also be equipped with direct operating mechanisms
- The switch disconnectors with lateral operating mechanism are suitable for door-coupling rotary operating mechanisms
- For 3KD switch disconnectors and lateral operating mechanism (left or right), only 8UD door-coupling rotary operating mechanisms without the test function can be used

- All basic units without handles are suitable for use with door-coupling rotary operating mechanisms, from size 1 to size 5 these can also be equipped with direct operating mechanisms
- The switch disconnectors with lateral operating mechanism are suitable for door-coupling rotary operating mechanisms
- For 3KD switch disconnectors and lateral operating mechanism (left or right), only 8UD door-coupling rotary operating mechanisms without the test function can be used

3KD switch disconnectors

Accessories

Additional poles

Note:

- Additional poles (4th contact element, N or N/PE terminal) must always be mounted directly adjacent to the switch disconnector on the left or right. Accordingly, an auxiliary switch module must not be mounted between the basic unit and an additional pole on sizes 1 and 2.
- For installation, it is important to note that only a 3-pole 3KD switch disconnector may be retrofitted with an additional switching pole with contact system (4th contact element).

¹⁾ Applies to degree of pollution 3
(for degree of pollution 2, use up to U_i 1000 V possible)
²⁾ If optional infeed terminal is used max. 160 A

³⁾ Max. 9 W for operation up to 160 A
⁴⁾ 3NP1 NH000 in narrow design only has IEC approval

3NP1 fuse switch disconnectors

System overview

Basic units

1, 3, 4-pole for floor mounting

3 and 4-pole mounting on busbar systems

Connection parts

Terminals for retrofitting to 3NP1

Auxiliary conductor connections

3-phase busbars

Assembly kits

DIN-rail mounting

Mechanical connection

1/4-pole busbar mounting

Locking function

Protection against power theft

Masking frames and covers

Masking frames and supports

Cable connection covers

Reach-around protection for busbar

Further accessories

Auxiliary switches

Isolating blades

Fuse carriers with and without fuse monitoring

Note:

You will find a detailed range of accessories with the basic units.

General information

3NA COM LV HRC fuse links

The new 3NA COM LV HRC fuse links with measuring and communication functions make your products communication-capable.

See [Fuse Systems](#), page 7/50

Modular design

The 3NP1 fuse switch disconnector has a modular design.

A wide variety of switch combinations can be created by connecting two devices or by subsequently fitting accessories. All common switch combinations are available from the factory ready for installation and can be found on the following ordering overviews. An overview of the possibilities offered by the modular design is provided on these information pages.

The fastest and simplest way to find the right switch combination is to use our 3NP1 configurator at sie.ag/3IIXQZH.

Directly to 3NP1
configurator under:
sie.ag/3IIXQZH

8

Number of poles

3NP1 fuse switch disconnectors are available from the factory in 1, 3 and 4-pole device versions. 4-pole types are available in all common versions from the factory ready for installation (without fuse monitoring, N-pole on the right-hand side).

All other conceivable device combinations, such as 2-pole 3NP1s, 4-pole with fuse monitoring or with a neutral conductor on the left-hand side can simply be put together on site by combining two 3NP1s. All that is needed for this in addition to the two 3NP1 basic units is the matching connection assembly kit (see accessories).

You will find further
information under:
sie.ag/2UlrAvy

Floor mounting and DIN rail

All sizes of the 3NP1 fuse switch disconnectors are available in floor mounting versions.

The 3NP1 is mounted on a mounting panel with screws.

You will find further
information under:
sie.ag/2UlrAvy

The devices for floor mounting of sizes 000, 00 and 1 can also be mounted on a DIN rail using accessories. For this purpose, the assembly kit for mounting on a DIN rail is simply mounted on the rear panel of the 3NP1.

3NP1 fuse switch disconnectors

General information

Mounting on busbar systems

3-pole and 4-pole 3NP1 are available for mounting on busbar systems. In the case of 4-pole devices, the infeed for the fourth pole is supplied by the neutral conductor bar located above the 3 phases.

You will find further information under:
sie.ag/2UlrAvy

1-pole 3NP1 devices for wall mounting in sizes 000 and 00 can be adapted to the 8US 60 mm busbar system using the assembly kit for 1-pole busbar mounting. Due to the modular design of the assembly kit, any phase can be selected for the infeed.

8

Fuse monitoring

You will find further information under:
sie.ag/2UlrAvy

The fuse monitoring is used to detect, indicate and signal that a fuse has tripped.

The fuse monitors are permanently installed on the handle of the 3NP1. They have floating contacts for remote signaling of a tripped fuse and also indicate this locally.

Various versions of fuse monitors are available, which can be selected to suit the requirements of the application (functionality, see table).

MFM electromechanical fuse monitoring with an installed SIRIUS circuit breaker

EFM electronic fuse monitoring with evaluation electronics

The EFM15 series is a cost-optimized version of the EFM10. EFM20/25 are versions with additional functions (display indication, detection and signaling of overvoltage/undervoltage with adjustable limits, phase failure detection).

Common combinations of the 3NP1 basic unit and fuse monitoring are available from the factory ready for installation. A fuse monitor can also be easily retrofitted by replacing the fuse carrier. (Fuse carriers for all fuse monitoring versions are available as accessories.)

Note:

Fuses with insulated grip lugs cannot be used for 3NP1 with fuse monitoring.

Electrical connection

You will find further information under:
sie.ag/2UlrAvy

3NP1 are available in versions with box terminals (all sizes) or flat terminals (sizes 00 and larger).

Various additional types of terminal are available as accessories for adaptation to the respective wiring situation, e.g. prism, saddle or three-tier terminals.

Further accessories

You will find further information under:
sie.ag/2UlrAvy

Auxiliary switches

Auxiliary switches enable remote querying of the switch position of the 3NP1. Up to two auxiliary switches can be installed.

Power theft

The assembly kit for protection from power theft seals the holes on the front of the 3NP1 (for voltage testing) permanently, which reliably prevents unauthorized access to live parts.

Isolating blades

4-pole 3NP1s are used in 3-phase AC systems with switched neutral conductors. They are supplied without an isolating blade for the N pole. The switching instant is selected by choosing the appropriate isolating blade.

Suitable fuses

You will find further information under:
sie.ag/2UlrAvy

The 3NP5 fuse switch disconnector is suitable for all fuses with LV HRC design in sizes 000 to 3 that comply with IEC 60269-2, including fuses for cable and line protection and motor protection.

Fuses for semiconductor protection (Siemens trademark SITOP) can also be used. However, some of these fuses have substantially higher power losses than fuses according to IEC 60269-2. This means that the load current has to be reduced until the value that is permissible in the fuse switch disconnector is not exceeded. For use of SITOP semiconductor fuses, ready-made derating tables are available in the linked document.

3NP1 fuse switch disconnectors

For a complete and valid configuration of your fuse switch disconnectors, please use our online configurator at www.siemens.com/lowvoltage/3np1-configurator

Notes:

- On the 3NP1 with fuse monitoring, the permissible operational voltage is limited by the fuse monitoring
- Permissible operational voltage with fuse monitoring:
 - MFM AC max. 690 V (L – L)/max. 440 V (L+ – L–)
 - EFM10 230 ... 690 V AC (L – L)
 - EFM15 3-pole 190 ... 690 V AC (L – L)
 - EFM15 1-pole 24 ... 240 V AC (L – N)/24 ... 250 V DC (L+ – L–)
 - EFM20 230 ... 690 V AC (L – L)
- Additional variants are available as accessories:
 - EFM15 with further operational voltage ranges
 - EFM25 – DC version of the EFM20
- Devices for busbar mounting with reach-around protection
 - For Siemens 8US, mounting is possible on the Wöhner Classic and Rittal RiLine systems without a floor pan
 - For Rittal, mounting is possible on the RiLine60 system with a floor pan

You will find a detailed range of accessories with the basic units.

General information

3NA COM LV HRC fuse links

The new 3NA COM LV HRC fuse links with measuring and communication functions make your products communication-capable.

[See Fuse Systems, page 7/50](#)

System description

You will find further information under:
sie.ag/2UlrAvy

The 3NP5 fuse switch disconnector is an extremely robust device for extreme operating conditions. The fuse carrier has a pretensioned spring that prevents accidental, slow closure. All 3NP5 are designed for mounting on a mounting plate. Size NH00 is also available in versions for 40 mm busbar systems. All sizes can also be mounted using adapters on 60 mm busbar systems.

8

Suitable fuses

You will find further information under:
sie.ag/2UlrAvy

The 3NP5 fuse switch disconnector is suitable for all fuses with LV HRC design in sizes 000 to 3 that comply with IEC 60269-2, including fuses for cable and line protection and motor protection. Fuses for semiconductor protection (Siemens trademark SITOP) can also be used. However, some of these fuses have substantially higher power losses than fuses according to IEC 60269-2. This means that the load current has to be reduced until the value that is permissible in the fuse switch disconnector is not exceeded. For use of Siemens SITOP semiconductor fuses, ready-made derating tables are available in the linked document.

General information

3NA COM LV HRC fuse links

The new the 3NA COM LV HRC fuse links with measuring and communication functions make your products communication-capable.

See Fuse Systems, page 7/30

Suitable fuses

You will find further information under:
sie.ag/2UlrAvy

The 3KF switch disconnector with fuses is suitable for all fuses with LV HRC design in sizes 000 to 3 that comply with IEC 60269-2. These include fuses for cable and line protection and motor protection. Fuses for semiconductor protection (Siemens trademark SITOP) can also be used. However, some of these fuses have substantially higher power losses than fuses according to IEC 60269-2. This means that the load current has to be reduced until the value that is permissible in the switch disconnector with fuses is not exceeded. For use of Siemens semiconductor fuses (SITOR), ready-made derating tables are available in the linked document.

8

Types of mounting

You will find further information under:
sie.ag/2UlrAvy

Floor mounting

All 3KF switch disconnectors with fuses are designed for floor mounting.

DIN rail

Size 1 can be snapped onto a DIN rail (TH35 according to EN 60715) as an alternative mounting method.

3KF switch disconnectors with fuses

General information

Electrical connection

Box terminals

The box terminals for size 1 (32 A ... 80 A) are designed to allow the rapid connection of stripped conductors.

Flat terminals

Sizes 2 ... 5 are available with flat terminals, for the connection of cable lugs or busbar systems.

You will find further information under:
sie.ag/2UlrAvy

Flat terminals at rear

Sizes 1 and 2 (32 A, 63 A and 125 A) are available with rear flat terminals, for the connection of cable lugs or busbar systems.

8

Auxiliary switch modules and auxiliary switches

Size 1

The auxiliary switches used for size 1 are microswitches (changeover contacts), which can be snapped into an auxiliary switch module. This auxiliary switch module is mounted on the side of the switch disconnector with fuses in the same way as an additional pole. A maximum of two microswitches can be installed in each auxiliary switch module.

Sizes 2 ... 5

- ① Auxiliary switch, leading
- ② Auxiliary switch, simultaneous

For sizes 2 ... 5, the auxiliary switches are directly attached to the operating mechanism module. The auxiliary switch with the leading switching function is always installed in the right-hand mounting location. The other locations are provided for simultaneously switching with the main contacts. Auxiliary switches with spring-type terminals from the 3SU1 program can also be used.

You will find further information under:
sie.ag/2UlrAvy

Differentiation 3KF SITOR and derating tables for SITOR fuses

You will find further information under:
sie.ag/2UlrAvy

Size 1

3KF SITOR is a variation of the proven switch disconnector with 3KF LV HRC fuses and provides optimized heat dissipation and permits the use of fuses with substantially higher power losses. All 3KF SITOR types are approved according to UL 508.

Siemens provides you with pretested load currents of the SITOR semiconductor fuses for installation in the 3KF SITOR. The derating tables are provided both for IEC constraints and for UL constraints and are intended to help you with selection. The permissible load faults for the 3KF LV HRC were calculated from the test results of the 3KF SITOR.

Accessories for 3KF LV HRC and 3KF SITOR switch disconnectors

Additional poles

Note:

- Additional poles (4th contact element, N or N/PE terminal) must always be mounted directly adjacent to the switch disconnector on the left or right. Accordingly, an auxiliary switch module must not be mounted between the basic unit and an additional pole on size 1.
- For installation, it is important to note that only a 3-pole 3KF switch disconnector may be retrofitted with an additional switching pole with contact system (4th contact element).

3NJ63 switch disconnectors with fuses

System overview

Fuse links

For LV HRC fuses

Accessories

Connection terminals
and covers

Auxiliary switches

Current transformers

Ammeters

Guide rails

Note:

You will find a detailed range of accessories with the basic units.

General information

3NA COM LV HRC fuse links

The new the 3NA COM LV HRC fuse links with measuring and communication function make your products communication-capable.

[See Fuse Systems, page 7/50](#)

Suitable fuses

You will find further
information under:
sie.ag/2UlrAvy

The 3NJ63 switch disconnector with fuses is suitable for all fuses with LV HRC design in sizes 000 to 3 that comply with IEC 60269-2, including fuses for cable and line protection.

3NJ63 switch disconnectors with fuses

Configuration

For a complete and valid configuration of your switch disconnectors with fuses, please use our online configurator at www.siemens.com/lowvoltage/3nj63-configurator

¹⁾ Using withdrawable design with touch protection according to BGV A3, adapter sleeves not included in the scope of delivery

²⁾ With permanently fitted adapter sleeves, incl. fuse link

³⁾ Do not use fuse links with nickel-plated contact caps

⁴⁾ In the case of permanent load over 35 A, we recommend the use of 5SH5526 lateral modules. Please observe EN 60439-1, Table 1

⁵⁾ In the case of permanent load over 35 A, we recommend the use of 5SH5533 lateral modules. Please observe EN 60439-1, Table 1

Note:

NEOZED adapter sleeves are required for these devices
